Beyond the Bull

We take a look at the misused tech jargon in the industry that we think is, essentially just bull, and rate them on a turd scale.

SCIENCE - PAGE 75-84

76 | Going with the flow

Understanding ocean currents, the giant conveyor belts of the Earth.

78 | Exotic states of matter

Researchers are coming across freakish states of matter all the time.

80 | Eco-friendly satellite propulsion

Using water as a propellant for satellite propulsion might soon become a reality.

82 | In-situ resource utilisation

These missions to other planets will have to use the resources available locally to support their efforts.

AND MORE

CULTURE - PAGE 65-74

66 | Books that should be made into TV shows

A list some of our favorite science fiction and fantasy works that would make great TV shows

68 | Same old, same old

Nostalgia is being sold to you, and you're buying it in truckloads.

70 | Meh-canical

Boo-Man is not a fan of knock-off mechanical switches.

72 | Computer Vision

Tech that gives computers eyes is the need of the hour and you could be a part of this field.
