ALTERNATIVES TO POPULAR ANDROID APPS

If you've been using apps after referring to a list of popular essential Android apps for a long time, maybe it's time you tried out the alternatives.

A single utility or function will have an exhaustive number of applications on the Play Store. For example, you will find several third-party keyboard apps other than SwiftKey or Gboard. Some of these alternatives turn out to be well-made and they become popular rapidly. And once that happens, you will find more developers delivering their take on the category. There are high chances that you haven't changed your default gallery application for years. Or maybe you have been using the same email app since you bought your first Android smartphone. Are you a power user who's always on the lookout for alternatives to stock applications? Are you bored of using the same app for years and want to try something new? If you answered yes to both the questions, this compilation is just for you in no particular order.

WALLPAPER

Searching for images online and turning them into wallpapers can be tedious. Additionally, this only works when you know what kind of wallpaper you need. Wallpaper curating apps make it easier to discover good ones. You must have heard about Google's Wallpapers or Backdrops that compile wallpapers across several categories and styles. If

you want a bigger collection and better curation, you should check out Walli. We know that there are numerous wallpaper apps but our search stopped at Fondo. Apart from curation, all the wallpapers are categorised appropriately. You can also explore popular wallpapers within the app and add them to your favourites to access them later.

LAUNCHERS

This category used to be ruled by Nova and Go back in the day when third-party launchers started appearing. Although both of them are still doing well, the Play Store has been flooded with several other options. Recently, we've been using Evie Launcher and Lean Launcher. Evie Launcher offers a minimalist launcher while offering a lot of customisation features similar to Nova. Its advantage is a live preview of the changes

you're making. This is not supported on Nova. However, it's limited in customisability for animations and you can't add a home screen dock. If you're interested in a more minimalist approach and don't need a lot of customisations, go for Lean Launcher – which does the job of adding sleekness to your phone in a small package. Apart from the basic home screen and app launcher settings, you also get the Google Now feed with a left swipe.

MUSIC PLAYER

With the rise of music streaming services in India along with price drops on data connections, local music playback has probably been forgotten. But if you're one of those who still carry their own music with them, you should probably move past the default music player. Phonograph is a great option for a minimal music player that supports almost all audio formats including FLAC. You can

customise the look of the app and even switch between a light and dark theme. If you're not a fan of listening to a flat sound signature, you can play around with the in-app equaliser according to your taste. The app follows material design, so you can expect a card-styled user interface.
