between a high-end variant clocked at 3200 MHz is quite significant compared to value RAM that sits at 2400 MHz. More than the speed, the pricing varies because of the quality of components used. Not all silicon wafers come out of the oven looking perfect. The good ones are used to build DRAM for the higher-end SKUs while the not so perfect sections of the wafer end up in these value RAM SKUs.

BUYING ADVICE

A TOASTY UPGRADE

Q Hi Digit.I want to build a new gaming PC with a ₹50k budget. I already have an existing GTX 1050 Ti but I would have to replace the rest of the stuff excluding monitor.

The rig should include

- 1) The processor should be from Intel.
- 2) I want liquid cooling in the rig.
- 3) RGB illumination is not a must .
- 4) I want to include good quality hardware including network cards and sound cards

Next I want some advice

- 1) I want to buy a ₹25k ASUS monitor but it's out of my budget could you

So yeah, we've bit the bullet and got ourselves tonnes of cheap RAM. Hopefully, these SKUs will last us for a long time. Or at least till they've justified the ridiculous amount of money we had to put down. What's your take on the RAM pricing issue? Have you put off your PC upgrade because of the spike or are you unfazed by the multiplicative rise? Let me know at agent001@digit.in

suggest a cheaper alternative with 144hz and 1080p?

- 2) Which motherboard is cheap but still very good for my rig?
- 3) I also want to include a good PSU.

Thanks in advance.

This is my first time building a computer and I don't want to mess this up please hope you can help me
Thanks

—Rohan Garg a.k.a. Toasty Sandwich

A Thank you for being clear about what all you wish to retain and the purpose for which you are building your PC. It really helps us come up with a proper configuration. Since you already have a graphics card, you're saving a massive amount from the configuration. However, you honestly don't need a CPU liquid cooler unless you plan on

There are a lot of decisions to make to get your first build right
