

Ban on crypto advertising

Facebook, Twitter and Google now prohibit advertisement of cryptocurrency services on their platforms. <http://dgit.in/NoMoCrypto>

Facebook's PC gaming lives

In a bid to compete with Twitch and YouTube, Facebook has begun allowing livestreaming straight from your PC without any additional software. <http://dgit.in/FBPCLive>

ANALYSING YOUR APPS

Startups offering app analytics services are changing the relationship between businesses and customers

Arnab Mukherjee | arnab@digit.in

A

lmost nothing happens in today's technology-laced world without the influence of analytics.

Whether it be the decision of which variant of coffee is preferred by customers in a certain locale or the strategy of choice to get a particular political leader elected, your behavior, analysed through the numerous data points you generate online and offline, determines most decisions that major companies and organisations take today. While web-based analytics has been one of the earliest forms of digital analytics, a relatively newer form of analytics is app analytics. There are quite a few companies in India that are harnessing the latest in technology to bring it to newer places. But before we find out more about them, we need to know what constitutes app analytics.

WEB OR APP?

We've experience web analytics and advertising based off of it for a long enough time to know that it works based on your actions online, such as when you're going through an ecommerce site,

searching on a search engine, and more. While it wouldn't be inaccurate to say that app analytics takes the same idea and puts it to native iOS and Android applications, that wouldn't nearly suffice as an explanation.

There are quite a few metrics that are technically the same across both avenues - active users, conversions and more. But beyond this there's a whole lot of stuff that puts app analytics ahead of web analytics in its ability to predict and understand user behavior. "Basic business analytics will help businesses track their sales and marketing spends, growth, revenues,

etc. that have an indirect bearing on the end customers", says Anand Jain, Co-Founder, CleverTap, a mobile marketing startup, "With app analytics, the end users can be identified, segmented, targeted, and monetized almost instantaneously. In a way, app analytics allow app businesses to mobilize every single app user with pinpoint precision and accuracy."

Here's a more specific example - most websites still treat people as 'visitors' if the website is open and continue to track them as active users regardless of whether they're actually on the website. The same is not an issue with

There are more apps today than ever before
