

Money can buy some happiness

Researchers have found out that money does buy happiness up to a certain point. <http://dgit.in/buyhappy>

Fossils aid the search for aliens

Extremely rare fossils preserving the soft tissue of ancient animals could allow interplanetary rovers to accelerate the search for life. <http://dgit.in/fossilife>

Tune Wars

From Indian platforms to international behemoths, everyone's vying for your ears.

A

mazon launched its Prime Music streaming service in India towards the end of February, making

it available to everybody with an Amazon Prime membership. With that, the count of formidable music streaming services in India increased by one and hence, arose the dilemma regarding which one to choose. On one hand you had homegrown services like Gaana, Saavn and Hungama that have gained a formidable following, whereas on the other hand you have international behemoths like Google Play Music, Apple Music and the new entrant, Amazon Music. There's a third hand in play here as well - tel-e-com operator backed platforms such as Jio Music and Wynk Music.

All of them have their own payment models and perks, with each trying to garner the attention of the musically inclined in its own way. We

decided to pit them against each other and find out who comes out on top. This is how it turned out.

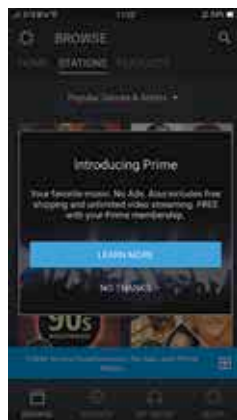

SUBSCRIPTION OR PREMIUM PLANS

Almost all the major music streaming services available in India have premium subscriptions at ₹99/month, except for Amazon Music, which is tied to an Amazon Prime subscription, as well as Apple Music, that goes for a high ₹120 for an individual membership. Wynk has a complicated price tiering depending on OS. If you are an Android user, the subscription costs the usual ₹99/month. iOS users have to shell out ₹120 per month, but iOS users with an Airtel SIM get a discounted rate of ₹60/month. The little to no

difference here makes any comparison depend on all the add-ons you get with the subscription. When it comes to the library itself, Apple Music, Google Play Music and Amazon Prime Music rule the roost at more than 40 million tracks. Gaana, Saavn and Spotify following up at 30. Hungama Music, along with the carrier backed Jio Music and Wynk Music lag behind here with

10 million or less tracks on their platforms.

While most Indian platforms get rid of ads for premium users, Amazon Music doesn't come with ads. Instead, the entire platform is locked behind the premium Prime membership. This is similar to what Apple Music does with only Beats Radio being available for free. Google Play Music, on the other hand, offers free
