ASUS ROG SWIFT PG27VQ

Beauty, brains and brawn

High-refresh rates have become quite common these days and so have

1800R curved monitors. So it was only a while before someone came out with an high-refresh rate 1800R curved monitor, and ASUS seems to be that brand. The ROG SWIFT PG27VQ features a TN-panel and has the familiar ROG styling that's all dark grey with sharp red highlights. And for the fans of RGB, the rear of the panel has a concealed RGB light panel that shines through the abstract pattern that lines the back. The panel is one of the brightest that we've ever seen, exceeding those of Acer and Benq's high-end units. With regards to the uniformity of the panel, we'd say that the PG27VQ sits in the top 3 with delta values that are as low as 6% from the average. Then there is the real world performance in games, jumping from 144 Hz to 165 Hz isn't that noticeable in most games. There are very few games such as Overwatch where you can notice the difference during moments of rapid movement. Switching on the overdrive brings that difference to near negligible levels. Overall, the PG27VQ is a really good gaming monitor and with that said, it also has a might price tag for its premium feature set.

Acer Predator 21X

Portable powerhouse

Rarely do powerful machines like the Acer Predator 21X or the

ASUS ROG GX800 get made. Even more rarer is when such machines make their way to India. Both machines are incredibly powerful and both are ridiculously expensive. The Predator 21X comes in a more portable form factor than the GX800 since it doesn't have a separate water cooling assembly. It does, however, sport a 21-inch curved panel and because of this, there's plenty of real estate within the chassis to build a decent cooling system. The upside is obviously the portability factor while the downside is that it can get quite loud while gaming.

Performance wise the Acer Predator 21X is just a tad below the GX800. With these two machines, you enter a territory where real world applications seem exactly the same and it's just the synthetic benchmarks that highlight the differences. Everything from the storage to the Wi-Fi speaks of flagship SKUs. The built-in speakers are very loud though the quality isn't exactly the best. Moving on, we have a touchpad that can be flipped around to give you a numpad. In every imaginable manner possible, the Acer Predator 21X is a fully-fleshed out gaming machine that's geared towards giving you the full desktop experience.
