Jonsbo C4

Poor cable management, impressive aesthetics

The Jonsbo C4 uses Aluminium on its exterior and we've got to admit, it looks

beautiful. You'll still find steel in the motherboard tray, PSU shroud, fan and storage mounts. Both the side panels are made of tempered glass where the one behind the motherboard tray has a black opaque coating so that you can hide all your cables. Jonsbo has taken a different approach by moving the PSU mount location to the top. In this design, the PSU fan will partially pull in the hot air coming out of the CPU fan while the rest of it will escape from the rear exhaust fan. Essentially, the PSU might contribute in keeping the temperatures low inside the case. The exhaust fan is the only fan included. Because of the PSU shroud on the top, there's no space to install fans on the top panel. Instead, it has been moved to the bottom of the case. Another interesting design is the fan cage at the front. Instead of using the front panel, they have added a cage with fan mounts

facing the side panel. It supports up to three 120mm fans. This mount can also support up to a 360mm radiator. There are reservoir mounting points at the bottom as well. Ventilation holes are present on the opaque tempered glass side panel. These vents don't have a dust filter. So, if you're using the front panel as an inlet, you'll be pulling in a lot of dust inside. Only the bottom panel has a dust filter throughout the case.

The C4 comes with an RGB light strip below the top panel. Our review unit's strip was dangling when it had come, so we hope that it was just our unit. The colours can be changed using a small module with three switches. What we didn't like about it is that it can't be controlled from elsewhere.

PERFORMANCE.....	78
BUILD QUALITY.....	60
FEATURES.....	67
VALUE.....	58

Everytime you want to change the colour, you have to open the side panel in order to access it.

Cable management isn't the best on the Jonsbo C4. We would suggest you to avoid a non-modular PSU with short cables since you might have to do a

lot of compromises in aesthetics. For instance, if you don't have a long PCI-e power cable, then you might have to push through the PSU shroud that looks ugly. Another example would be using the storage mount located on the fan cage. If your cable isn't long enough, you won't even reach it.

There are two SSD mounts behind the motherboard tray towards the bottom. If you wish to use them then you have install them before screwing the motherboard since they are located behind the motherboard. This is poor design and Jonsbo could have simply gone for SSD trays on the back attachable through thumbscrews. If you wish to remove your SSD later for whatever reason, you will have to remove the entire motherboard.

The PSU shroud also contains a storage mount but we would recommend to avoid it and use this area to store the extra cables instead. Routing the cables is a pain since there aren't enough tying points on the plate which is another flaw according to this. There's also only one cutout on the plate and again, short cables will be a problem, especially for the 24-pin motherboard power cable.

Temperature performance was normal in the case. It wasn't bad nor was it spectacular. The single exhaust fan surprisingly did well.

Since there were enough

vents on the front panel and no dust filter, the case was able to pull in cool air generously. Without any load, the CPU and GPU idled at 40 and 34 degrees respectively. Pushing the components to stress led to the CPU and GPU touching 57 and 68 degrees.

Considering the price, the C4 is meant for enthusiasts who want a beautiful-looking case. Its new design approach hasn't affected the temperature performance but it's certainly a pain to assemble. You'll be better off with longer cables or a modular PSU if you're buying the case. There's enough support for cooling solutions, so you don't need to worry about future upgrades.

—Abhijit Dey

SPECIFICATIONS

MOTHERBOARD FORM FACTOR: Mini-ITX, Micro-ATX, ATX | POWER SUPPLY STANDARD: ATX standard (max. length of 150mm) | I/O PORTS: 2x USB 3.0, 1x microphone, 1x headphone, Power button | DRIVE BAYS: 2 x 3.5-inch HDD, 2 x 2.5-inch SSD | COOLING SUPPORT: 3 x 120mm (front), 2 x 120mm (bottom), 1 x 120mm (rear) | RADIATOR SUPPORT: Up to 360mm (front), up to 120mm (rear) | CLEARANCES: CPU cooler - 167mm, Graphics card - 300mm | DIMENSIONS (H x W x D): 434mm x 205mm x 449mm
