Zowie Celeritas II

Built to last longer than your PC

Price
₹15,000

FEATURES.....47
BUILD QUALITY.....78
VALUE.....58

The Adomax Flaretech switch on the Celeritas II is an optical mechanical switch that only relies on light signals to register key presses. Essentially, you don't need to worry about corrosion and double key presses. While Cherry MX switches offer a lifespan of 50 million keystrokes, the Flaretech Red switches are rated at 100 million keystrokes. This is double the durability of mechanical switches. The switches on the Flaretech are linear and they feel similar to Cherry MX Reds. Unlike mechanical switches, these switches are hot-swappable which means that they can be removed from the keyboard while it's turned on.

The Celeritas II keyboard, however, isn't meant for everyone. It's directed to professional players who require high precision in their key presses. Using light signals also means insanely low input lag and a lower debounce time. These high-end features would hardly matter to casual or even hardcore gamers since it's almost indistinguishable in real-world usage. There are no high-end features such as software support, USB passthroughs and macro recording support. You would expect such features on a full-size mechanical keyboard when you're paying such a premium price. But one thing that the Celeritas II gets completely right is durability and currently, it's unmatched in the gaming keyboard market. This keyboard will definitely outlive all your PC components with proper care.

—Abhijit Dey

SPECIFICATIONS

KEYBOARD SIZE: Standard, Numpad included | KEYBOARD BACKLIGHTING: Single LED (Red) | SWITCH TYPE: Optical mechanical (Adomax Flaretech Red 100-million lifecycle) | POLLING RATE: 1,000 Hz (1 ms) | KEY-ROLLOVER: N-key rollover | INTERFACE: USB 2.0 | DIMENSIONS: Width - 44 cm, Depth - 16.5 cm, Height - 3.6 cm | CABLE LENGTH: 1.8m

WD Black SSD 512GB

The best from WD's stables

Price
₹17,700

PERFORMANCE.....84
BUILD.....75
VALUE FOR MONEY.....74

After having been disappointed by WD's Blue and Green SSDs, we finally got the WD Black NVMe SSD, a good year after it had launched and we can confidently say that this isn't a disappointment like the previous two borne out of WD's acquisition of SanDisk. For starters, it features a Marvell 88SS1093 for the controller and boasts of a peak read speed hitting 2050 MB/s. Write speeds on the other hand are reportedly at 800 MB/s. In CrystalDiskMark, we ended up getting 1860 MB/s for read speeds and 818 MB/s for write speeds. Post conditioning, both speeds do fall off quite a bit with reduced queue depth which is quite a far way from most of the competition. The Samsung 960 EVO which costs about ₹1.2K more than the WD Black 512 GB sports roughly 2.4x the read speed under the same conditions. Then again, the controllers and the NAND technology between the SKUs are vastly different.

At the end of the day, the WD Black 512 GB NVMe SSD is the best that WD has to offer. In a way, getting higher speeds would need switching to 3D NAND from their current planar technology and also getting a better controller. However, WD has excellent after-sales service, so that's always a factor that helps WD's case. For just ₹1.2K more, you're getting one of the best SSDs in the market making it difficult to justify the price.

—Mithun Mohandas

SPECIFICATIONS

WDS512G1X0C | FORM FACTOR: M.2 2280 | COST/GB: ₹34.57 | DIMENSIONS: 22 x 80 x 2.3 mm | CONTROLLER: Marvell 88SS1093 | SanDisk 15nm TLC | WARRANTY: 5 years
