

THIS IS TECHNOLOGY, CULTURE AND SCIENCE WITH A DIFFERENCE, AND THAT DIFFERENCE IS USUALLY ENOUGH TO MAKE MOST NORMAL PEOPLE GO "WTF?"

ALT this month:

Fancy yourself some sci-fi armour? We show you the details of armour designs across science fiction properties. And before you're done geeking out on that, we move on to the latest in the world of gadgets and cars with the DGT section. Also find out what Microsoft plans for India.

No, cockroaches can't survive nuclear armageddon

Chinese scientists have deciphered the entire genetic makeup of the American cockroach and have found that they have over 20,000 genes which help them adapt and survive to the harsh habitat they thrive in. None of those point to being able to survive a nuke though. <http://dgit.in/roachplsno>

WHAT'S NEW

Amelia Earhart's bones identified

Richard Jantz, professor emeritus of anthropology and director emeritus of UT's Forensic Anthropology Center, upon re-examining bones that were first examined in 1940 concluded that the bones most likely belong to legendary female pilot Amelia Earhart.

The seven bones were first examined by physician D. W. Hoodless who had concluded then that the bones belonged to a man.

However, using several modern techniques that weren't available at the time, Jantz was able to determine the correct sex of the remains. In fact, the computer program he used to determine the sex is one he co-created himself and is used by nearly every board-certified forensic

anthropologist in the world.

To further solidify this, Jantz compared the bone length with Earhart using an old photograph of hers and a scal-

able object. Based on whatever information he had acquired, Jantz stated that "until definitive evidence is presented that the remains are not those of Amelia Earhart, the most convincing argument is that they are hers."

China will ban people from buying plane and train tickets based on social credit

China is somewhat infamous for its social credit system and for good reason. Now news is out that starting May, China will start banning Chinese citizens who rank low on the social credit system from purchasing train and plane tickets. This is according to statements released by the National Development and Reform Commission of China.

China's social credit system is how the government rates its citizens based on various factors like criminal behaviour or

financial trouble. They also keep track of how citizens spend their time and spending habits, etc. On top of the tracking, now having a low score means you will have to deal with penalties and restrictions.

China is still working to roll out the full version of the system by 2020. So far, only early versions are in play.

Nuclear bunker neighbours unhappy

A former Yugoslavian, Jakov Loncarevic has spent two years building a "nuclear proof" bunker in Minyip, Australia. However, neighbours are fed up and the council has issued a warning to stop work on his bunker. <http://dgit.in/nobunk>

Boaty McBoatface completes its most perilous mission yet

The autonomous underwater vehicle named by the internet completed a two-month long mission where it explored a massive ice shelf in the Weddell Sea, south of Antarctica. <http://dgit.in/mcbface>

Ants take measures when treating other infected ants

It's been discovered that when dealing with a superinfection, ant colonies designate ants that are more resistant to the infection to treat the infected ants to prevent spreading of the infection. <http://dgit.in/antscare>
