For better control

Agent001's mobile game obsession has him hunting for a controller

veryone is into gaming these days and by everyone, I mean it. Toddlers are mesmerised by fancy

glowing thingies on the screens of their parents' phones and are whacking their way to the top of the leaderboards while grandparents are beating their grandkids in Candy Crush and Star Legends. Then there is me and countless others who make up the bulk of the gamer community that lie between these two extremes. Of late, most of the guys in the Test Centre have been playing way too many mobile games. Even the freshly joined intern plays a lot of mobile games in her spare time.

What I've noticed is that more and more games with complicated game mechanics are making their way onto your smartphones. Take PUBG or Fortnite for example, even folks who've rarely downloaded video games on their smartphones can be seen shouting at the top of their lungs in multiplayer lobbies. Some of these titles are teetering at the edge of being playable on the mobile screen. Especially, titles such as Arena of Valor, which is a MOBA, can require some rigorous finger gymnastics during heated moments. Like some of the guys who've started playing Arena of Valor, I too have jumped onto the MOBA bandwagon with Mobile Legends 5v5: Bang

Bang. I've experienced it first hand, the feeling of helplessness that you experience when you simply can't move your fingers quick enough to counter the enemy team's nuker. This is where I decided, I'd have to buy a controller for my smartphone.

Before I got a new controller, I decided to try some of the ones we already have in the Test Centre. First,

too tight, you won't get any numbness in your index or ring fingers. Then there's the Dual Shock 4 controller for the PS4. It's way smaller and gives a closer grip than the either of the Xbox controllers, however, getting it to work in Windows isn't easy. There's always DS4Windows that lets you use the DS4 controller with Windows and remap the keys in whichever manner

The Xbox 360 and PS4 controllers

we tried the Xbox One controller. Now Microsoft has truly done its research before building this piece of machinery. For those who game on the PC and need a controller for those console ports such as Dark Souls, the Xbox One or even the Xbox 360 controller is the way to go. We honestly prefer the 360 controller over the Xbox One controller because it fits the hand better. As long as you avoid holding it

you want. Then there are the game-specific controllers such as steering wheels and joysticks for flight simulators but all of these game-specific controllers are of no use for mobile games. That's where a different breed of controllers come into play.

Controllers for mobile games need to have a clamp, a good set of buttons that cater to all the popular games on the market and an accompanying
