Logitech Z625 2.1 Speakers

Great sound, now with the added benefit of optical input

Price
₹15,995

The Logitech Z625 does the three parameters of power, low-end bass performance, and value for money quite well. In addition, you get optical connectivity which is quite useful when you want to connect directly to a TV or gaming console (except the lack of a remote might be a problem with some fixed output TVs). As PC speakers your gaming and movie watching experience will be more than satisfactory.

Plus, with an output of 200 Watt RMS, the Logitech Z625 has more than enough power when you need to pump up the volume occasionally for that one-off house party, especially with the useful 3.5 mm input. The addition of Bluetooth connectivity would've surely completed the package.

Since we are now nitpicking, the audio performance, while fairly good, could've been better in the upper mids. The sparkly signature coupled with the sometimes overpowering bass might not be for everyone. In that case, a less powerful but more accurate system in the same price range such as the Swans M10 might be a better choice. The Logitech Z625 has an MRP of ₹15,995, but usually goes for ₹7,500 to ₹8,999 thanks to online offers. At this price point, you won't go wrong.

—Siddharth Parwatay

SPECIFICATIONS

TOTAL WATT (RMS): 400 Watts Peak/200 Watts RMS | SUBWOOFER: 260 Watts Peak/130 Watts RMS | SATELLITES: 2 x 70 Watts Peak/2 x 35 Watts RMS | OPTICAL INPUT: 1 | 3.5MM INPUTS: 2 | RCA INPUT: 1 | HEADPHONE JACK: 1 | WARRANTY: 1 year.

D-Link DIR-878 AC1900 Wireless Router

Simplified networking

Price
₹7,499

The DIR-878 is a welcome change from D-Link and by that we mean that it's a lot more user friendly to begin with. Gone are the days when you'd have to call in someone with a technical bent of mind to set up your router.

These days the manufacturers are actively trying to make the firmware simpler. The DIR-878 is one such router. Setting it up is a breeze and the built-in connectivity wizard will work with any of the top ISPs in the country. As for the build quality, the outer shell is plastic like any other router and the antennae are non-detachable. It's powered by a MediaTek MT7621AT dual-core CPU clocked at 880 MHz and it uses two MediaTek MT7615N for the individual bands. The entire PCB assembly seems like a fairly standard configuration but each SoC is properly shielded and has a large shared heatsink. We believe that the power circuitry could have been improved. Performance wise, the DIR-878 works like a charm, the four antennae can be aligned to ensure an even signal strength in your average home. The MU-MIMO manages multiple clients with ease and our bandwidth test on the 2.4 GHz radio managed to peak out at 90.4 Mbps while the 5 GHz radio hit a ceiling of 388 Mbps. Moreover, it has Smart Connect so you need not worry about the individual bands. Overall, the DIR-878 is a fairly well performing wireless router with a decent build quality.

—Mithun Mohandas

SPECIFICATIONS

MODEL: DIR-878 | WI-FI: 802.11ac | LAN: 10/100/1000 Gbit | WAN: 10/100/1000 Gbit | SOC: MT7621AT, 2x MT7615N | DIMENSIONS: 10 x 7 x 1.75 inches | WEIGHT: 570 gm | WARRANTY: 1-year.
