

### Microsoft's first Linux product

Microsoft released its first Linux product, Azure Sphere, which is a software and hardware stack made to secure edge devices. <https://digit.in/linuxmicro>

### Motorola launches 4 phones

Motorola launched the Moto G6 and G6 Play as well as the Moto E5 Play and E5 Plus with big batteries and tall screens. <https://digit.in/moto>

# Intel Core i7-8700K vs AMD Ryzen 7 2700X

AMD just released the second generation of Ryzen CPUs, let's see how it stacks up against the current desktop champion, the Intel Core i7-8700K.

# A

MD is back with a revision of their desktop CPUs and this time they've polished out most of the kinks and brought out a CPU that's all set to set fire to the CPU battle yet again. The new lineup is led by the AMD Ryzen 7 2700X which is still rocking 8 cores / 16 threads but thanks to a new process node, it is supposedly more efficient and performant as well.

The Ryzen 7 2700X is retailing at an SEP (Suggested Electronic Price) of ₹24,490 and we've seen Indian retailers selling it for ₹29,488 which is roughly ₹2,000 more than the Intel Core i7 8700K that it's set to compete against. The Intel Core i7-8700K is the current king of the hill. It has two fewer cores than the AMD CPU but its IPC is way greater and thus, it excels in single-core performance. Let's see how they match up this time.

Both the Intel and the AMD CPUs ship with unlocked multipliers. The Intel Core i7-8700K has a lot of over-clocking headroom and has been over-clocked to 7405.12 MHz as of writing this while the Ryzen 7 2700X has been clocked to 6000 Mhz. The former has been out in the market for a long time so there are a lot more overclocking submissions on HWBOT and the next couple of months will paint a better picture of how well the 2700X over-
