

DELETE YOURSELF

Leaving your digital footprints all over the internet is a goldmine for advertisers, and big data firms considering the various ways in which these tracks are analysed.

With the increased capacity of churning massive amounts of data, and pulling out relevant information, many aspects of human existence have gotten converted to numbers. You might have come to a point where you just want to opt out, but it is better to know what the problem actually is, before taking the step. Facebook and Google do provide you with all the data on you, as well as granular settings to control the ads that you see. There are also approaches you can use to shatter any echo chambers around you, and have a little fun with your social media accounts by totally confusing any profiling or advertising systems in place.

HOW YOUR DATA WAS USED

A psychographic profile is the indication of the attitudes, beliefs and fears of an individual. The methods and approaches used to farm your psychographic profile have actually been developed back in the 1980s. A simple questionnaire is all that is required to

harvest the psychographic profile of an individual. This questionnaire could be disguised as a quiz, or a personality

test. The popularity of social media allowed researchers to procure psychographic profiles at scale, for a large
