

approach for Facebook posts, Twitter posts and blocks of text is more or less the same, and as such is a platform agnostic solution. The model used by the Cambridge University tool to generate the psychographic profile is based on 53,000 predictive words and phrases, that are gathered by churning the data from 69,000 volunteers and 14 million status updates. There might be more accurate models, that use a larger set of predictive words and phrases. The best approach here is to process the text being shared, through an automatic translator. Funtranslations.com lets you choose from Cockney, Boston and Australian dialects. There are

DELETE TWITTER

Backup your data

- 1. In the profile, select 'Settings and Privacy'

paraphrasing tools, or spinners that just substitute words in your content with synonyms. Some of the more advanced AI rewriting tools require a subscription. The content, once rewritten, can make you seem more relaxed than emotional, or more contemplative than engaged to the profiling tools. You can also directly specify the ads you want to see.

TAKE CONTROL OF ADS SERVED TO YOU

Facebook lets you take control of the ads that are served to you. How Facebook ads work is that while Facebook has information about you, that information is not directly provided to the advertisers. Instead, the advertisers tell Facebook what kind of users they want the ads delivered to. Then Facebook takes the call in deciding which ads to show which people. Now there is plenty of room for the end user to micromanage what kinds of ads they see on the platform.

The Facebook Ad Preferences are categorised into interests, advertisers you have previously interacted with, your personal information, and topics. Interests usually involve broad categories such as "role playing games", "comedy films", or particular pages you've liked. This list is auto populated, and you can remove any items that you do not want to see ads related to.

Facebook also provides the information on why the particular item was

DELETE GOOGLE

Backup your data

- 1. Go to Google Takeout dgit.in/gltk

- 4. Provide a reason and key in your password

Delete your account

- 1. Go to dgit.in/delinsta
- 2. Select a reason
- 3. Enter your password
- 4. Click on 'Permanently delete my account'

picked for you. You cannot keep this list empty however, as it gets populated again over use. However, already deleted items do not show up again.

Advertisers you have interacted with are on the platform, and have shared with Facebook information about you that they have gotten by themselves, such as your email ids. This allows Facebook to understand that the advertiser in question has a relationship with you. You can directly remove any advertisers that you do not wish to receive ads from.

In the 'Your Information' section, you can decide what kind of personal information you are okay with sharing to advertisers. These are just your relationship status, your employer, your job title, and your education. These can

Manage your categories in Facebook Ad Preferences
