

THIS IS TECHNOLOGY, CULTURE AND SCIENCE WITH A DIFFERENCE, AND THAT DIFFERENCE IS USUALLY ENOUGH TO MAKE MOST NORMAL PEOPLE GO "WTF?"

ALT this month:

As changes to Steam's privacy policy practically handicaps Steam Spy, we bring to you what could be the last Steam Spy Stats for 2017. Also check out what JetBrains plans for aspiring developers in India before diving into some DGT and Auto goodness.

Leaked Apple memo warns about leaking info

In an ironic turn of events, an Apple Inc memo warning employees that serious repercussions will be taken against those who leak info, was leaked.

WHAT'S NEW

Brain surgery practice

An ancient cow skull was found with a hole drilled into it and it's thought that it may have been due to surgical testing in ancient times.

The cow skull, which was excavated from a settlement in France roughly 5000 to 5400 years old, was found with a surgically created hole on its right side. Normally, after a bone injury, the bone starts to heal. It wasn't the case with this skull, indicating that the cow was already dead or died soon after.

From what scientists can gather, it appears that ancient surgeons may either have practiced their surgery on a dead cow, or perhaps attempted to unsuccessfully

save the life of a sick cow. If it's the latter, then this is also the oldest known case of a veterinary surgery as of April 19, 2018.

T-ant-T

Scientists have discovered a species of ant that fight off enemies by detonating themselves.

The ants, named *Colobopsis explodens*, cover their foe in a yellow toxic goo like substance when they explode.

The ants were discovered in the Borneo jungle and dwell in the trees. While the detonation is quite powerful it also ends up killing the ant, much like what happens to bees

after they sting someone. The detonation literally explodes the ant's whole body.

The *Explodens* ants are a rare find, and are the first new ant species to be discovered since 1935.

When met with an enemy, the tiny reddish ants do not flee, but instead bite and latch onto their foe, point their backsides directly at the attacker and flex their abdomens so hard they tear their own body apart, which releases the fatal toxic goo stored within.

This act is carried out only by the minor workers, all sterile females, who will sacrifice their lives by exploding in order to protect the bigger members of the colony

China's cockroach farm

China is home to a cockroach farm that breeds over 6 billion cockroaches a year. The AI powered building ensures optimal conditions for the roaches survival, which are important ingredient in a "healing potion" used in China, called Kangfuxinye.

Hackers steal through thermometer

A casino was hacked through an IoT thermometer in its lobby aquarium and its entire high-roller database was stolen. IoT devices are increasingly being targeted by hackers looking to exploit the lack of security standards in the industry.

Fortnite first, tornado later

As a storm was raging through the neighbourhood on a Sunday night, teenager Anton Williams continued his game of Fortnite despite witnessing his neighbours' roof getting blown off. He did help his sister and nephew by asking them to hide in the bathroom.
