

MOVIE

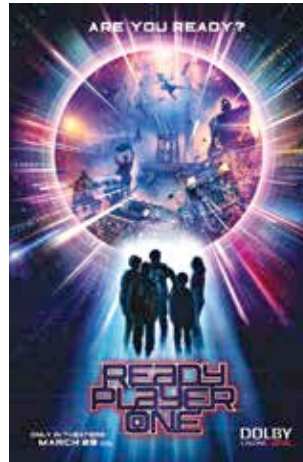

Ready Player One

★★★★☆ | In the dystopian future of Ready Player One, there exists a virtual universe where anything is possible. This universe is called Oasis, and in it resides just about every geeky pop-culture reference you can imagine. Many of which aren't really mentioned in the book, but Spielberg went ahead and put them in anyway. And from the one person in our test labs who has actually read the book, it would appear that the film is actually better than the book. Well isn't that a rare case.

The movie is all about saving the Oasis from those who would do it harm. How do you go about that? Easter eggs of course! Turns out the game's creator has hidden an easter egg, and whosoever finds the egg, will inherit the game and the creator's immense wealth. And just about everybody in the world is playing this game, somehow.

Ready Player One is a movie where, if you start overthinking, you'll start enjoying it less. Once you go under its flashy surface, the movie kinda lacks substance, especially the movie's ending. It kinda didn't click.

Just the nostalgia value of the movie pulled in a lot of the crowd as well, and we get it, a movie about easter eggs has a lot of easter eggs in it, but some argue that maybe that kind of stole away the spotlight from the movie itself? We're not saying that the movie was bad, we quite enjoyed, but, food for thought right?

TV SHOW

Lost in Space

★★★★☆ | None of us are old enough to have enjoyed the original 1960s Lost in Space TV series, but some of us were old enough to watch the 1990s movie with the same name that featured Friends star Matt LeBlanc. While many hated the film with a passion, one amongst us loved it, and he's the one writing this review. Set your bias filters to high, people!

Lost in Space is best dealt with as a series, which the movie proved by leaving you wanting for so much more. Maybe they had a whole trilogy planned, we'll never know, but it bombed, so that was the end of that.

The storyline follows the Robinson family and the adventures they have after being lost in space for whatever reason. We don't want to spoil it for you and tell you the reason in the latest series. In fact, we're going to insist you watch the series, so we're not going to give away any spoilers, which makes this review almost impossible.

All we will say is that it's very, very rare to have a sci-fi series that the whole family can watch, complete with toddlers and nonagenarians, and still have a good, embarrassment-free time. The effects are awesome, the story captivating, and the characters are played pretty well. Even if you have watched the old series and movies, this is a different approach so the story is pretty different, as are the characters. Also, you can binge watch all 10 episodes in season 1 right now, and you should!

UP AND COMING

MOVIE

The Assassin's Code

Definitely not as awaited or hyped as the following two movies this month, but the Assassin's Code intrigued us enough to warrant a mention here. We'll definitely keep an eye out for this one.

Release date: May 11

MOVIE

Deadpool 2

Deadpool is back! and we can't help but quote the movie's plot here - "Disfigured cafeteria chef (Wade Wilson) struggles to fulfill his dream of becoming Mayberry's hottest bartender". And you know what? That was just the plot's intro.

Release date: May 18

MOVIE

Solo: A Star Wars Story

Solo tells the tale of Han Solo and how he became the man that he was, how he met his co-pilot Chewbacca, and maybe even the legendary Kessel Run! Being Star Wars fans ourselves, we're quite excited about this one.

Release date: May 25
