AMD Ryzen 5 2600

Killing the mid-range

Price
₹15,328**A**

MD's second coming with the Ryzen family has certainly got Intel's

feathers ruffled. So much that we've started seeing a successor coming in from Team Blue with 8-cores and 16-threads. The Ryzen 5 2600 is a good

competitor in the mid-range segment given its pricing and performance gain over the previous generation. It's closest competitor, the Core i5-8500 is at a disadvantage because it lacks multi-threading. On one hand you have a 6-core/6-thread CPU in the Intel Core i5-8500 and on the other hand the AMD Ryzen 5 2600 is a 6-core/12-thread CPU. Suffice to say, the Ryzen 5 2600 knocks the older Ryzen 5 1600 off the rack.

This makes it a no-brainer to get the Ryzen 5 2600, especially given that AMD has improved upon its gaming performance. Intel and AMD are both matched in terms of config prices now that Intel has launched the budget-friendly H370 boards. So if you look at performance, pricing or feature set, we're looking at Intel being on the back foot except in one domain - the IGP. AMD does have the 2400G to make up for that but then it loses out on compute performance. So if you're going to be buying a graphics card, then the Ryzen 5 2600 becomes your go to CPU but if you're short on budget or wish to postpone your graphics card purchase then the Intel i5-8500 becomes the obvious choice.

—Mithun Mohandas

SPECIFICATIONS

CORES: 6 | THREADS: 12 | BASE CLOCK: 3.4 GHz | BOOST CLOCK: 3.9 GHz | PROCESS NODE: 12nm | L3 CACHE: 16 MB | L2 CACHE: 512 KB per core | TDP: 65 W.

Nokia 6 2018

A distinct echo of the Nokia of the past

L

ooking at the phone, it's apparent that

Nokia is on the right path to earning back the trust it used to once enjoy. The sturdy build quality, premium design and promise of regular updates all point to Nokia of the yore. Nokia has made some adjustments to the design that allow the phone to withstand some damage. For example, the display has a 2.5D protective glass on top that doesn't stretch all the way to the edges. As a result, the slight gap between the glass and the metal frame provides a cushion to the display in case it falls. Unlike the Redmi Note 5 Pro and the new Zenfone Max Pro which have better suppression of reflections, the Nokia 6 offers a lot of screen glare which isn't a good thing.

Benchmark reports evidently peg the Nokia 6 (2018) lower than the competition. The phone clocked a score of 90146 on AnTuTu 7.0 and on Geekbench Single and Multi Core, it scored 873 and 4154 respectively. In terms of graphics, it came very close to beating the Redmi Note 5 Pro with a 3DMark Slingshot score of 1368. HMD has kept the camera specifications mostly unchanged in the Nokia 6.1. What's changed is the addition of Zeiss optics lenses and the return of the Nokia Pro camera app. In daylight, the camera performance is at par with the competition in the mid-range. The camera's low-light performance still can't match up to the likes of the Redmi Note 5 Pro. While its predecessor was underwhelming, the Nokia 6 (2018) as the phone is quite capable of taking on the best of the lot in the mid-range segment, both in terms of performance and imaging prowess.
