

Martian Watches shuts

Smartwatch maker Martian watches has announced that it has ceased operations due to lack of funds. <https://digit.in/jun18-A40-1>

Israel's Self-Flying 'Cormorant'

Tactical Robotics' autonomous aircraft may not look too cool, but it might make battlefields safer. <https://digit.in/jun18-A40-2>

Corsair 460X RGB White

Your ivory rig

While incorporating the basic essential features for a powerful rig, the case offers impressive build quality on almost every front. We don't have any qualms with white cases, except that the coating tends to easily wear off in case of careless handling and scratching. It's the same here as well. There's healthy support for cooling with three 120 mm RGB fans already installed. The top panel supports up to 240mm radiators. However, you need to check the height of your memory sticks and CPU cooler. We would have appreciated if there was a bit more room behind the motherboard.

Thermal performance on the 460X is decent. The three intake fans on the front panel do a good job of blowing out all the hot air out of the cabinet without any exhaust. In this stock fan setting, the CPU temperature stabilised at 55 degrees Celsius while the graphics card settled at 69 degrees. The case doesn't ship with any exhaust fans. However, we populated all the fan mounts to attain a balanced air pressure inside the cabinet. This configuration hardly made any difference to the stress temperatures, so the delta temperatures differed by one or two units. It shows that you won't be achieving better performance by simply adding more fans.

The Corsair 460X not only performs well in our thermal testing, it offers robust build quality (except the paint job) and features to showcase a beautiful build.

ASUS Zenfone Max Pro M1 64GB

Top performer with stock Android

The design of the Zenfone Max Pro isn't going to get points for being innovative, but it does come across as well-built and functional. The added heft, thanks to the massive 5,000 mAh battery provides a good grip and the minimalist body makes the display the centre of attraction.

ASUS claims to have used Qualcomm's TruPalette and Ecopix display technology to render a higher contrast ratio of 1500:1, which shows when you watch something on the screen. The blues and the greens look saturated with high contrast while skin tones are made more accurate. ASUS' choice of using the latest hardware and stock Android will keep this phone in the limelight for some time to come. The benchmark results also narrate the same story. There's almost a 50 percent jump in AnTuTu score from the Redmi Note 5 (which uses the SD625) while the Redmi Note 5 Pro (which uses the SD636) is almost at par, edging the Zenfone Max Pro out by roughly 50 points.

While the Zenfone Max Pro matches the competition in every other aspect, the camera leaves a lot to be desired. The phone even manages to take on the formidable Redmi Note 5 Pro, save for the imaging prowess, but the pros easily outweigh the cons. In all, it's always good to have a choice of clean stock UI without compromising on the performance.
