

Fourth human on Moon dies

Alan Bean, the fourth human to walk on the Moon and one of the first to live aboard a space station, dies at 86. <https://dgit.in/jun18-A56-1>

Vevo defacers arrested

Two 18-year-old French citizens have been charged with crimes related to the hack of Vevo YouTube accounts. <https://dgit.in/jun18-A56-2>

The system software that manages hardware and software resources for your PC has a predefined look and functionality. Look into these options to alter the most popular one: Windows.

Dhriti Datta | feedback@digit.in

O

perating systems on your PCs and laptops are the programs that are initially installed on the device by a

boot program and then go on to control and manage all other programs you install on your computer. OS have been known to be redundant in their appearances and functions even with major updates. If you are someone who craves customisability in your experiences, you might want to try these tips and tricks.

The vanilla Windows 10 look may start to feel drab in a while.

Don't like the way Windows 10 looks or feels? Or has it simply become way too jaded and you crave a change? Well, look no further.

ICONOGRAPHY

We recommend CustomizerGod, which is a customisation tool that primarily focuses on changing and customising icons on Windows. It covers almost all kinds of icons present on Windows including drive icons, shell icons, battery icons and navigation icons. It even lets you change the

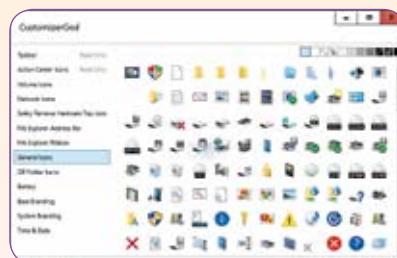

Mod your Operating System

appearance of the login and logout screen, bringing true personalisation to the OS. Although this tool is highly 'noob-friendly', we still recommend that you create a backup. Fortunately, CustomizerGod lets you do even that.

Method:

- To start off you will need to head over to CustomizerGod's download page (<https://dgit.in/CustomizerGod>) and download the ZIP file.
- Extract it to any location you want and run the file. Remember, you must have admin rights to do this.
- Go to General icons on the left taskbar and select/single click the icon that you want to change.
- Click on the 'Change' button at the bottom and then you can select your

CustomizerGod has an array of icons that can change almost every default icon on Windows.

own personalised icon. We suggest looking at IconArchive (<https://dgit.in/IconArchive>) as they have a wide variety of icons available.

- Your File Explorer will restart and the new icon will be applied.

BOOT-UP LOGO

Windows 10 lets you change the lock screen as well as login screen background image. However, changing the boot logo may not be so simple, but it is certainly interesting and will further help you alter how Windows looks. HackBGRT is a free boot logo changer software for Windows, although it is specifically for UEFI systems.

Method:

- Download HackBGRT (<https://dgit.in/HackBGRT>) and then open the setup.exe file.
- If you haven't disabled Secure Boot, the program will prompt you to do so as it is necessary to change your boot logo.
- Click 'I' to install once you have opened up the setup.exe file. This will open up a Notepad file.
- You will need to edit this configuration file by specifying a path to the exact image, or multiple images, you want to display and also edit other parameters like position.
- Save the configuration file. This will in turn open up a Paint window where you can draw/paste your desired image.
- Make sure to save the image(s) in 24-bit format on Paint.
