Seagate VR Power Drive which, as the name suggests, is a hybrid of a power bank and a portable hard drive. <https://dgit.in/jun18-A57-2>

Edit the notepad files and give the program the details it requires.

- Save the changes and your boot animation will be revamped to your choice.

TASKBAR

7+ Taskbar Tweaker is one of the best tools to customise your taskbar as per your requirement since it lets you control multiple aspects of the Windows taskbar. The benefits of installing this tool is that it makes changes and allows controls over aspects that cannot be customised by using taskbar properties or making changes to the registry. It is specially designed for Windows 7, 8, 8.1 and 10. Let's delve into how we can use this powerful tool.

- Download 7+ Taskbar Tweaker onto your PC (<https://dgit.in/Taskbar-Tweaker>). Run the exe file.
- Proceed with and finish the installation of the tool.
- A window, as displayed in the image above, will open up, loaded with a plethora of customisation options for your taskbar.

Enjoy all the multiple options 7+ Taskbar Tweaker gives you to customise your Windows taskbar.

CREATE APP GROUPS

Ever wish that 'Folders' as seen on Android OS were available on Windows to declutter your home screen and add

seamless functionality? It is now a possibility with Fences. This is a paid app but the functionality and beauty it adds to your desktop makes it worth it. Also, there is a 30-day free trial. Fences allows you to become a master organiser by allocating apps and icons into resizable shaded areas on your desktop. They are called 'fences' and act like folders helping you organise apps and icons into predefined groups.

Method:

- Download fences here: <https://dgit.in/Fences> and open the exe file. Allow Fences to make changes to your PC when it prompts you by clicking Yes.
- After agreeing to their terms of service and choosing a destination, you will be asked to type in your product code. You could activate the 30-day free trial here instead by simply entering your email ID.
- All your icons and apps on the homescreen will be neatly arranged in three default groups which include Programs, Folders and Files & Documents. Lead a clutter-free life by installing this nifty little tool. Fences gives the desktop a sleek and modern look, along with adding tons of functionality as well.

CUSTOMISE WINDOWS TILES

Tiles were a beauty to look at back when they were released. It's been a while now though, so you might feel incentivised to change their appearance as well. TileCreator allows you to alter the tiles and can be downloaded from the Microsoft Store itself. The app will let you change the visual appearance of the tiles and gives you access to the background colour, text and image used on a tile which lets you customise it as you see fit.

Method:

- Go to the Windows Store and install TileCreator.
- You will also need to download the TileCreator Proxy Installation zip file and extract it. (<https://dgit.in/TCproxy>).

- Run the TileCreator Proxy.exe file as administrator.
- Next, you will need to open the drive where Windows 10 has been installed. You will be able to locate a folder called Tile Creator there.

Roll up fences lets you categorise apps and put them away into neat, rolled-up folders.

- Open the folder and then open the file called ApprovedApps with the Notepad application.
- Type in the name and complete path to the app that you want to edit and pin to Windows. Save the file once you have done this.
- Finally, you will need to launch the TileCreator app. Behold all the options before you! You can now customise the name, picture, tile colour and text colour of the tile you chose.

TileCreator lets you modify the appearance of the tiles on Windows.

Your drab, old Windows OS should look significantly different after you've implemented all the customisations these apps and tools confer upon your OS. However, if you still want to take things further, we suggest you look into tools like Rainmeter and Ultimate Windows Tweaker 4. However, if you just want some aesthetic changes for your OS, these tools should help you achieve that goal easily.
