

Offline access to music and videos has become pretty popular among smartphone users while commuting. They don't have to worry about network issues and seamlessly enjoy their favourite content. This has also led to a gradual rise in data generation and ultimately, a rise in demand for more storage space. Apps can take up a lot of space over time and for users who belong to the curious kind, they require more storage space to accommodate numerous apps. Even though Indians have 23 apps installed on their smartphones on an average, they only use 10 of them on a regular basis according to the MSS research. If your daily smartphone usage involves a lot of mobile apps, especially games, you will keep on running out of storage space frequently.

SanDisk's storage solutions

The average smartphone internal storage size in Q3 of 2017 was 28 GB, according to a technology market research firm Counterpoint Research. The average Android ROM takes up about 11 GB of that. Then you have your essential apps which you simply cannot do without and at the end of it all you're left with barely anything for your photos, videos or files. That's where storage solution manufacturers such as SanDisk come into the picture.

SanDisk's portfolio of storage solutions has something or the other for everyone. Let's say you have a smartphone with an SD card slot, then you can get a SanDisk SD microSD to supplement your phone's storage. You might wonder that SD cards are slower than internal memory. While that is true, SanDisk does have solutions that come really close to the performance of internal memory. Take for example, the SanDisk Extreme microSD card that has 400 GB of storage space with read speeds of up to 90 MB/s and write speeds of up to 160 MB/s. It's perfect for high-end smartphones which support 4K recording and need high-speed transfers. Moreover, it's designed for use in extreme environments so your files couldn't be in safer hands. SanDisk microSD cards are available in capacities ranging from 4 GB to 400 GB.

Android smartphones have always had the ability to expand storage but iOS devices such as the iPad and the iPhones? Not quite the same story. Apple has very strict parameters for accessories that can work with the iOS ecosystem, so when you consider an Apple certified storage accessory such as the

"Everyone wants to share their memorable experiences instantly on social media platforms using their smartphones, while on-the-go. The evolving trends have resulted into a high volume of data generation by smartphone users in today's times. And in the end, the in-built storage is never enough to sustain such volume of data. To be able to create space in the handheld device, precious memories have to be compromised. "Our line-up of external storage products fulfils the needs of users who generate a lot of data on their smartphones on multiple platforms without having to delete existing data."

SanDisk Dual Drive Type-C –
Easily transfer files from your Type-C smartphones to your USB Type-A devices through USB 3.1 speeds.

SanDisk Ultra USB Type-C Flash –
Enjoy high-speed USB 3.1 performance on file transfer with the Ultra USB Type-C Flash Drive to free up space from your smartphones

SanDisk iXpand Base –
Plug in your iPhone and let the iXpand Base automatically back up all the new photos and videos while charging the device

SanDisk iXpand, you can rest assured that you're getting a quality device. Speaking of the iXpand, it's not just a simple storage device but there's an included app to make your life much simpler. It not only automatically backs up select folders but comes with a built-in media player that plays music and video files. So when you are decluttering your photos, videos, music and other files, and organising them, you can preview all these files right in the SanDisk iXpand Drive app. iXpand drives are available in capacities ranging from 16 GB to 256 GB.

It's well-known that not all phones come with microSD card slots but your memory problems still remain. So what now? Well, SanDisk has you covered in that aspect as well with the SanDisk Connect Wireless Stick. It works with Android and iOS devices and transfers data over Wi-Fi. Simply take the SanDisk Connect Wireless Stick and connect it to your power-bank and you're good to go. It's capable enough to stream to three devices simultaneously, so if you're heading out on a trip with your friends, then the SanDisk Connect Wireless Stick is practically a must have device. Load up all your favourite music and videos on it and you're good to go. It's available in capacities of 16 to 256 GB.

That's not all you have to choose from SanDisk's stables. They have the iXpand base which is an iXpand clubbed with a powerbank. Then there's the SanDisk Dual Drive Type-C which can plug into your phone on one end and your PC on the other end to allow quick transfer between the two devices. And not to mention, you always have the trusty flash drive range that have become synonymous with the words quality and durability. Looking at SanDisk's entire memory portfolio, you really can't claim to have memory problems anymore. ■
