

HiMirror

The HiMirror, unveiled at CES 2018, is an internet-connected smart mirror powered by Amazon's Alexa, that comes activated on the device. Yes, you heard that right! Mirrors now have the ability to talk back to us just like in fairy tales. The device has a built-in camera which analyses your skin, tracks your skincare objectives and can scrutinise the results of your skincare products. The mirror comes preinstalled with LED lights along its side which help users tweak the lighting conditions to match their desire. It is capable of analysing multiple aspects of your skin and informs you of all the flaws it deciphers. It scores your features on the basis of percentage (the higher the percentage, the worse the particular feature on your face). The device also sports an entertainment centre which features news stories, weather forecasts, makeup tutorials, music, etc. It also allows you to scan the barcode of your products and keep a track of how

much of it is left as well as when it expires and should be thrown out. The HiMirror Plus is priced at \$219 (approximately ₹14,900) and is available on their website and Amazon.

Samsung The Wall

Samsung launched a 142-inch MicroLED modular TV at CES 2018. The Wall is essentially an entirely bezel-less screen, aiming to transform your home by altering the aesthetics of a simple television set. The device is set to launch in August, however, its price has not yet been confirmed. Samsung claims that the user of this ginormous television will be able to transform the size of the Wall to their desired size on the fly. The MicroLED, modular television attracted a lot of attention at CES due to its sheer size and its beautiful self-emitting pixels. The Wall replaced Samsung's QLED technology in television and inaugurates the ground-breaking MicroLED screens, which uses a technology that shrinks LEDs to smaller sizes, empowering them with the ability to produce their own light. The Wall has only been unveiled in one size- 142-inches, however, smaller, more affordable variants may be making their way to the market.

Samsung Flip

Samsung is tapping into a new market and recently revealed the Samsung Flip at CES 2018. Flip is a 55-inch, smart whiteboard specifically designed for businesses, although they can also be utilised in state-of-the-art schools for interactive learning. The whiteboard has a smooth, matte finish and comes with a dual-sided stylus, with a fine-point side for writing or drawing and a broader side for highlighting. The Flip can be connected to USB storage devices, smartphones and laptops and can import and export data between these devices. The device supports 20 blank, scrollable pages and does indeed flip! The screen can be turned around horizontally or vertically to match the users' needs. The futuristic device costs \$2700 (approximately ₹1,84,000), priced competitively against its contender, the Google Jamboard.
