iRobot Roomba 980

The new iRobot Roomba 980 promises cleaner floors and the ability to seamlessly navigate an entire level of your home. We were actually surprised by that. We've had a Roomba here before and the 980 was clearly superior to the previous Roomba in terms of navigation. Of course it missed a few (many) spots in our labs, but it did a pretty decent job of navigating through the clutter. This is the Digit test labs after all, there's stuff everywhere! The iRobot Roomba 980 still managed to somewhat make its way around the labs and back to its dock to recharge, after giving all us a little victory toot announcing the end of its lap.

The 980 shouldn't have problem with stairs, but if you're still worried it might roll off the edge (we would be, the thing is quite expensive), the Roomba 980 ships with two sensors that you can place at locations you want the Roomba to avoid.

The Roomba comes with something called iAdapt 2.0 which basically

allows it to keep track of itself while it navigates a room. And we have to say it did a decent enough job with that. Of course, there's a whole lot of places where the Roomba couldn't fit in our labs, but it definitely attempted to go wherever it could, including under the cupboards and such.

The setting-up process was also easy, once the dock was placed and plugged in and the Roomba was charged, we just pressed the clean but-

ton and it was on its merry way. The device was pretty loud though.

The Roomba 980 also has an accompanying app like all things do these days. The iRobot HOME app lets you clean and schedule timings for the Roomba from anywhere, which aids accessibility. The Roomba 980 also supposedly automatically increases power when cleaning carpets, which is a nice little bonus feature.

D-Link Mini HD Wi-Fi Camera

Whe D-Link mini Wi-Fi cam is basically a tiny camera which you can connect to remotely via your phone, that doubles as a security camera. It comes with many features one would expect in a security camera, such as night vision, motion and sound detections, and can alert you immediately when it catches something unexpected on its sensors. It records motion and sound on the mydlink cloud, which you have to pay for separately, but you get one day, i.e., 24 hours of recording for free. You can opt to manually save video and snapshots locally to your mobile device as well.

One of the things that stands out about the mini camera is well, its size. It doesn't stand out too much but at the same time is capable of recording at 720p. Instructions on connecting to the device are simple, once the device is plugged in, you simply need to download and launch the myDlink app on your mobile device and follow the instructions provided there to connect your device to the camera.

SPECIFICATIONS

1/4" progressive CMOS sensor | **MINIMUM ILLUMINATION:** 0 lux with IR LEDs on | **MINIMUM OBJECT DISTANCE:** 50 cm | **LENS FOCAL LENGTH:** 2.45 mm ± 3% | **APERTURE:** F2.4 | Digital zoom (4x) | Time stamp and text overlays | Configurable sound detection level | Configurable motion detection windows | **VIDEO RESOLUTION:** 1280x720 at up to 30 fps | **AUDIO SUPPORT:** MPEG 2 AACLC | **NETWORK CONNECTIVITY:** 2.4 GHz 802.11n/g wireless with WPA/WPA2 encryption | **PRICE:** ₹2995
