

California mandates solar homes

California is the first US state to mandate every home and building built post Jan 1 2020 must have solar panels. <https://digit.in/jun18-B50-1>

All new Google One

Google One is Google's new plan replacing Google Drive's online storage plans, priced at \$1.99 for 100 GB. <https://digit.in/jun18-B50-2>

Career as a Technical Evangelist

Technology

The new face of the company, it's brand ambassador. It's a job to die for and you need to be ready to go to the ends of the world for it (literally)

Tabitha Thomas | feedback@digit.in

W

hen you hear the word 'evangelist', the common religious connotation of the term comes to mind.

However, it is said that in ancient Greece, the term evangelist meant the reward that was given to the messenger of good news. If anything, the title 'technical evangelist' has more to do with the latter than the former.

SO WHO IS A TECHNICAL EVANGELIST?

Before we get started, it is important that you understand that even in the world of technical evangelists there is a ladder that you can climb. There are tech evangelists and then there are chief evangelists. Think about it - in the initial phases of a company, one of the founders could take on the role of the chief evangelist. But once the company starts doing well, there will be opportunities created to hire technical evangelists (TEs) to help spread the proverbial good news.

"The Technical evangelist is the face of the organization in the technical community and represents the technical principles, mission and vision of the organization", is how Aditi Relee, Technical Evangelist at Microsoft India defines a TE.

So let's break this down. A technical evangelist has a job role similar to an industrial analyst, the difference being that a TE gets paid by a company that has vested interests in said industry. To be a good TE, you need to be a darn good developer or tech expert too. The most important part of your job is to ensure that you are garnering support from fellow technicians in the same field. The only way you can garner actual support from them is to be exceptional at your job, if you are not they will see right through you.

"Therefore the role mission and role of a technical evangelist is to empower and inspire the developer ecosystem to experiment and push the limits of new and upcoming niche technologies. The Technical evangelist

is responsible for early adoption platforms and products, create referenceable solutions, create an overall positive perception for the organization and build a loyal technical community that will vouch for the organization", adds Aditi Relee.

WHY DO COMPANIES HIRE TECHNICAL EVANGELISTS?

Every company has a vision and it is usually the CEO and other partners of the company who are entrusted with the job. When they hire an evangelist it says a lot about the future of the company. It is a direct way of committing

Steve Jobs, Elon Musk also act as technology evangelists for their industry and company.
