

Noctua NH-U12

Having launched their next generation NF-A12x25 120mm fan, Noctua showcased them at their booth along with a few minor upgrades to their existing products. The venerable NH-U12 series of CPU coolers has been consistently improving and delivering impressive performance. Entering its fifth generation now, it will be taking advantage of the new fans, two fans to be precise, in a push/pull configuration. The heatsink has also been redesigned to achieve 37% more surface area and now it has seven heatsinks. Noctua is planning to release it later this year or early in 2019. Another interesting update was on their Chromax line-up which adds some coloured flair to the fans. Earlier, they offered covers for heatsinks and coloured rubber padding for the fans. This year, Noctua released all-black versions of most of their CPU coolers and fans covering every part of the products.

Roccat Vulcan

The new Vulcan line-up of mechanical keyboards were showcased for the first time at Roccat's suite this year. Along with the keyboards, the company also displayed their foray into custom mechanical switches called the Titan Switch. Developed in collaboration with switch manufacturer TTC, they wanted the switch to have specifications based on their requirements rather than going for the generic solutions. Although they look low profile, they aren't since the total travel distance is only 3.6mm compared to 4mm on traditional switches. Roccat also packaged a custom firmware to reduce the debounce time to 4ms from the usual 5ms. The Titan Switch is linear and tactile, so it's closer to what Cherry MX Browns feel like. These switches have been developed to support RGB lighting as well. The Vulcan series comes built-in with the company's AIMO lighting technology. A unique design approach has been taken for the keycaps which might not be preferred by everyone.

ASUS ROG Phone

ASUS didn't just launch a new powerful smartphone with the latest hardware. They launched an entire mobile gaming ecosystem with several accessories that will enhance your gaming experience. When you're doing some serious gaming, you're mostly likely going to hold the phone in a landscape orientation. This will be the case for the hardcore games rather than the casual ones which require only one hand. To aid this particular grip, touch sensors have been added on top of the display

to offer a console-like experience. Called AirTriggers, you can assign actions to these sensors to make it easier to play FPS games. Speaking of accessories, there are three offerings. The TwinView Dock offers a second screen so that you can play your games while using other apps and also for livestreaming your gameplay. Want a desktop experience from your phone? Use the Mobile Desktop Dock to connect your monitor, keyboard and mouse to play your mobile games. The last accessory is the Gamevice Controller and WiGig Dock that allows you to wirelessly stream your gameplay on a screen along with a console experience using the controller.

SPECIFICATIONS

Processor: Qualcomm Snapdragon 845 | **Display type:** AMOLED | **Display size:** 6 inches | **Display resolution:** 1080 x 2160, 18:9 ratio | **Screen:** HDR, 90 Hz refresh rate | **Storage:** 128 / 512 GB | **RAM:** 8 GB | **Primary camera:** Dual 12MP + 8MP | **Secondary camera:** 8MP | **Battery:** 4000 mAh
