Microsoft Surface Pro (2017)

Great tablet, underwhelming laptop

he unit I've got with me for review is the Surface Pro i5 Model 1796. This

model is powered by an Intel Core i5-7300U CPU (clocked at 2.60GHz), with 8GB of RAM and 256GB of solid-state storage. Without these magnetic accompaniments, the Surface Pro is solidly built for a standalone tablet. The fanless dual-core Intel Core i5 processor stays cool most of the time but can get quite warm when crunching a lot of data. It's still quite comfortable to hold and draw though. The 12.3-inch glossy and reflective PixelSense display on the Surface Pro has an aspect ratio of 3:2, a resolution of 2736 x 1824 pixels and a screen brightness of 390 nits. The keys on the Surface Pro's Signature Type Cover keyboard are flat but feel excellent. The Surface Pen works splendidly while drawing and writing. Performance on the Surface Pro is somewhat underwhelming. The Intel Core i5-7300U processor, clocked at 2.60GHz, is sufficient for most office and light creative tasks. Gaming is best avoided on the Surface Pro. Running PCMark's Creative conventional battery life test revealed a score of 4 hours and 33 minutes on a full charge. On at least two occasions, the Surface Pro clocked five hours without begging to be plugged in when used just for writing. All things considered, the Microsoft Surface Pro shines in a lot of areas where a regular laptop simply can't.

OnePlus Bullets Wireless IEM

Impressive performance at a decent price

T

he device is made using memory alloy material, which is covered in liquid silicone. The in-line controls feature three buttons, where one in the middle handles three tasks. The earpieces of the device are magnetic and include play/pause functionality. The Bluetooth range of the earphones is around 9 meters. The earphones are splash and sweat resistant as well but there's no mention of an IP rating. It delivers about 7.5 hours of continuous audio playback after a full charge, or one and a half day at 60 percent volume.

However, OnePlus has equipped it with Dash Charge, which gives around four hours of audio playback in ten minutes. The sound signature is ever so slightly bright, mids are crisp and vocals are pronounced. The acute frequency response for instruments falling in the lower range of the audio spectrum is great. We did notice slight bass spread while listening to *Limit your love* by James Blake and subtle blending of bass guitar with kick drums in *Black Tambourine* by Beck. The Bullets Wireless are vaguely tiring after listening to music continuously for a couple of hours, and we noticed smooth roll-off while listening to *Get Lucky* by Daft Punk. There is minor distortion at volumes above 75 percent. With detailed mids, clear lows, and a rather expansive soundstage, these wireless earphones show up as a serious rival to competitors that are similarly priced. However, the earphones might not appeal to percussive electronic music listeners (EDM and house music basically), who want extreme bass as the highlight.
