

Intel discrete GPU

Intel has announced that it plans to release the its first discrete GPU, one that isn't integrated into a CPU, in 2020. <https://digit.in/jul18-30-1>

Super Smash Bros. Ultimate...

...will support the classic Nintendo GameCube controllers, is also bringing every playable character from Smash Bros history. <https://digit.in/jul18-30-2>

Corsair K55 RGB

Premium membrane keyboard

Price
₹4,599

T

Corsair K55 RGB, Corsair has a membrane key-board which is now

becoming less popular while mechanical keyboards are becoming more mainstream. The K55 RGB packs most of the features you'd find on high-end Corsair keyboards. Features such as dedicated keys for multimedia playback and volume control are present on the top right. You'll also find buttons to record macros on the fly, control the brightness of the illumination, and lock the Windows key. Macro recording is a great feature to have on a keyboard if you intend on using them in video games. Those macros can be assigned to the extra set of six keys present on the left.

The keyboard sports a maximum key rollover of eight and that's enough for gaming. We didn't come across any erroneous ghosting on the keyboard. Software support is brilliant. You get the entire set of macro recording functionalities, including mouse clicks, available on other premium keyboards. Lighting control is also included in the software; however, it's limited since not much can be done because of the absence of pre-key lighting.

The noise and tactile feel of a mechanical keyboard isn't really appealing to everyone out there. If you're among them, then it totally makes sense for you to go for a membrane keyboard. And if you're looking for a really good option, the Corsair K55 RGB has all the premium features you'd want on a gaming keyboard. Apart from personal preference for a premium membrane keyboard, we don't see any extraordinary reason for someone to opt for the K55 RGB.

—Abhijit Dey

SPECIFICATIONS

Nokia 8 Sirocco

Premium from the outside, aged from the inside

Price
₹49,999

T

he Nokia 8 Sirocco (along with the Nokia 8 last year) is a sign that

HMD Global-backed Nokia also aims to establish itself as a premium brand. The materials used, the finish, and the feel of the Nokia 8 Sirocco in the hands certainly makes it one of the best-designed phones out there, but the fact that it bucks the latest trends might not bode well with most users. Compared to last year's Nokia 8, the refreshed offering has even smaller bezels on the top and the bottom while the sides are essentially bezel-less. The peak brightness of the panel on the Nokia 8 Sirocco is quite high and we had no problem in using the phone outdoors. The fact that this phone runs on older hardware might be an indication that Nokia plans to launch a full-fledged flagship later this year and the 8 Sirocco is indeed a special edition to showcase its craftsmanship. On AnTuTu 7.0, the Nokia 8 Sirocco notched up a score of 150130 which is definitely much lower than the Samsung Galaxy S9, which scores 248535. It also couldn't beat the Pixel 2 XL. On Geekbench Single Core and Multi-Core tests, the Nokia 8 Sirocco scored 1938 and 6660 respectively, again in line with last year's flagships. Under low light, the camera fails to live up to the competition. The underwhelming camera and the aged hardware makes it difficult to recommend the phone over the likes of the Pixel 2 or the OnePlus 6. The phone also supports Qualcomm Fast Charging and refuels the tank in just about an hour, along with wireless charging.
