

Home Security by Ring

Ring's new full home security system, called Ring Alarm, is revealed to be releasing next month and will be priced at \$199. <https://digit.in/jul18-32-1>

Google Home becomes smarter

The smart speaker can now handle three questions or request at a time, allowing users to multitask easily. <https://digit.in/jul18-32-2>

Optoma UHD65

Great colours but dimly lit

Price
₹4,25,000

P

Given that the UHD65 has a 2,200 lumens lamp, it doesn't stand up to the

lower-end models such as the HD27 which have a 3,200 lumens lamp.

Optoma's frame-interpolation technology PureMotion doesn't work as well as expected. The Optoma UHD65 has really good colour reproduction, especially in the Reference mode which is the closest to the Rec 709 standard. The Dynamic Black feature is turned on by default across all picture modes and looks really good. Without it, the images become very washed out.

Along with HDR10 support, the UHD65 can also convert SDR to HDR with different picture modes. The HDR SIM in its default Standard mode seems more appealing than the bright mode. Film and detail, for most of samples, felt unnatural. Beyond this, certain nuanced issues only come out in test images and don't show up in a discernible fashion in your day to day use cases. The built in speaker setup with two 4W speakers which fall short ridiculously in all aspects. Thankfully, Optoma has both analog and digital audio output.

The Optoma UHD65 is on Amazon for ₹2,41,383 while channel retail can go as high as ₹4,25,000. Verify the warranty coverage and then go for it online because ₹4,25,000 is honestly way too much for the UHD65.

Overall, the Optoma UHD65 is leading the charge for budget 4K HDR projectors. If you're getting the unit online, then the price is certainly justified, otherwise, it's a bit too much.

Xiaomi Redmi Y2 64 GB

Jack of all trades, master of one

T

he Redmi Y2 is a typical Xiaomi device. The company

misses out on the fact that a good display is just as essential to the selfie-taking experience as the camera. On Geekbench 4 Single Core, the Redmi Y2 scored 792 while on multi-core it scored 3,400. Both numbers are much lesser when compared to phones like the Realme 1, Redmi 5 and Honor 7X. In real world usage, the Redmi Y2 is quick, slick and smooth. Xiaomi has tuned its MIUI interface to work well with older chipsets and that effort shows in the Redmi Y2. Xiaomi said it's using pixel binning to improve selfies. The feature is used on much more expensive phones like the Huawei P20 Pro and the older Nokia Lumia 1020. That essentially increases the signal to noise ratio so that more details are caught along with reduced digital noise. To be honest, the rear camera has more going for the Y2 than the front.

As for the portrait mode, it would be unfair to expect the quality of flagship phones. But for what it's worth, the Y2 handles portraits quite well. The phone lasted around 5 hours 16 minutes on PC Mark's Work 2.0 battery test which means it will last just around a day for most average users out there.

Its front camera tech sets it apart from the rest, although the results are more or less consistent among other products by Xiaomi. The main threat for the Redmi Y2 is not from its own siblings though, but from its rivals. The Redmi Y2 doesn't bring anything groundbreaking to the table. It's bland, but functional.
