

Apple AI Phone

Apple confirmed at WWDC 2018 that they were making the Apple AI Phone, a highly personalised phone powered by Siri AI. <https://digit.in/jul18-38-1>.

Google AI sets limitations

Promises that they not be allowing the use of their AI technology in weapons and certain forms of surveillance. <https://digit.in/jul18-38-2>

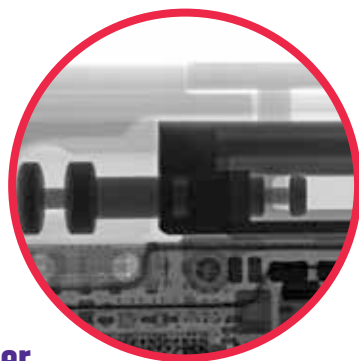

Teardown: OnePlus 6

Clean design; risky display repairability

Abhijit Dey | abhijit@digit.in

Hefty alert slider

Compared to all the tiny components, the alert slider is massive and it stands out in the X-ray. There's a metal plunger inside that flips a mechanical switch. The switch is directly soldered to the motherboard. This is why the slider feels robust.

Water resistance

Even though there isn't any official certification nor marketing from OnePlus, the SIM card tray appears to have incorporated some form of water resistance. There's a rubber gasket around the outer edge of the tray that should prevent water from entering the device.

Long fingerprint sensor cable

If you're one of those who prefer repairing their own phones, you'd be relieved that the fingerprint sensor cable at the back is long. This prevents any kind of damage when you're trying to remove the back cover.

Single pull tab for battery

Unlike other smartphones, the battery is easily removable on the OnePlus 6. Where you would usually find two or four pull tabs for battery removable, the 6 has a single pull tab. Although the battery is labelled as not removable, it is fairly easy.
