

Nintendo Switch battery packs

Anker announced two new battery packs that have been specifically optimised to fast charge the Nintendo Switch. <https://dgit.in/jul19-39-1>

Gun-detecting phone case

The SWORD smartphone case can allegedly detect if a person is carrying weapons through sound waves. <https://dgit.in/jul19-39-2>

More water protection

Moving inside, we see more water protection measures near the flex cables towards the lower portion of the motherboard. At the bottom of the phone, we can see more rubber gaskets protecting the phone around the speaker grille, USB Type-C port, and headphone jack. However, it won't survive a complete submersion underwater.

OnePlus 6

OIS is back

After the OnePlus 3T, optical image stabilisation disappeared from OnePlus smartphones. It has now made a comeback with the IMX519 Sony sensor which is the primary 16MP camera sensor on the phone. The 20MP IMX376K sensor is the same one found on the 5T while the front 16MP IMX371 sensor has stayed the same since the OnePlus 5.

Display bumper

The OLED panel on the phone is glued down firmly to the main frame. This means it's impossible to remove the display without causing damage. A phone's display is usually the most repaired component and the approach used here is a big disappointment.
