

Asahi Power Service Umbrella Drone

The name says it all, it's an umbrella drone, for the elite who don't want to waste both hands holding an umbrella up during the rain. Yes this is an actual thing. The drone is dubbed called the "Free Parasol", which means hands-free. The umbrella is mounted on a DJI Mavic Pro drone. The Free Parasol is apparently able to track and follow you in the rain, through AI to keep your head dry. If you're seeing a lot of flaws, you're not the only ones.

The first one obviously is that the drone will need to be flying pretty close to your head in order to function properly as an umbrella. Having a machine with rotors spinning at high speeds near your head is not a cheery prospect.

Then of course, rotors spinning at high speeds equals high volume. It's going to be LOUD. Sure, you have two hands free, but you probably won't be able to hear yourself think.

The battery life of the Free Parasol is just a little under half an hour, which is actually enough for short walks. The drone cannot be used in windy conditions, which is the type of weather one might associate with rain. Finally, it's a drone, and many countries now have regulations against the wide-

spread use of drones. The plan is to introduce the drone for use in private areas only - such as resorts and golf courses. The company, Asahi Power Service, have said that they want to start by aiming the drone towards golf players, well clearly, at \$275, they'll be the only ones who might consider buying it. If you're desperate to have both hands free during the rain, consider an umbrella hat instead.

Masta Box

Whatever happened to fidget cubes and fidget spinners? They were all the rage a few months ago. While some of us are glad the phase passed, the rest of us did actually enjoy fidgeting with them.

Now all these toys were good for was fidgeting. Imagine if they could do more. That's where the Masta Box comes in. This fidget gadget wears a lot of hats. It can be an air mouse, a joystick, it can work as a laser pointer, and it can work as a Micro SD card reader.

The team behind the Masta Box have re-engineered the fidget cube to work as a Bluetooth device that's packed with multiple functions to give you more bang for your buck.

Masta Box comes with Bluetooth 4.0 and is compatible with both PC and Mac. In addition to working as a universal Bluetooth controller, it also doubles as a fidget toy. It's a win-win really.

Bugatti Chiron Lego Technic Set

Lego has released a new kit following the Porsche 911 GT3 RS Technic kit. This time it's a 1/8th scale set of the Bugatti Chiron. The completed kit measures 22-inches long, 9-inches wide and 5-inches tall. There's 3,599 pieces in the kit; about 1000 pieces more than the Porsche kit. Like one would expect from Lego, the set is incredibly detailed. This is a to-scale model after all.

The set features a W16 engine that comes with moving pistons and a motor coupled to a working eight-speed gearbox.

Even though this is a Lego set, the kit does a great job of showcasing the aerodynamic body of the hypercar. If that wasn't all, the kit also comes with the Chiron's "speed key". Priced at \$350, the Bugatti Chiron Lego Technic set is only available in one colour, the classic Bugatti dual tone scheme of dark blue and light blue.
