

TUF Gaming Alliance

Cooler Master and ASUS have partnered together to bring you a new line of TUF Gaming products. While TUF Gaming is a product series from ASUS, they're making a joint effort with Cooler Master for the TUF Gaming Alliance. Cooler Master provides the chassis, cooling, and power supply options in this partnership.

The Cooler Master Masterbox MB500 mid-tower case, the MasterAir MA620P and MA410M heatsinks, and the MasterWatt power supply range including 450W, 550W, 650W, and 750W options are the products getting new digs in the TUF Alliance, all of which will be getting the TUF Gaming styling treatment, with the grayscale digital camouflage design.

The Masterbox MB500 incorporates the TUF Gaming styling on the edge-to-edge tempered glass side panel as well. All the power supply wattage choices will also get grayscale digital camouflage. The MasterWatt lineup is 80 Plus Bronze-rated and offers semi-fanless operation, modular cabling, and a five-year warranty.

MasterAir MA620P

Are two towers better than one? The MA620P has two towers with dual MasterFan MF120R RGB fans in a push/pull configuration.

MasterAir MA410M

With the single tower on the MA410M, push and pull design is easy. The RGB lighting on the fans can be controlled as well.

TUF camouflage

The recognisable digital camouflage has been added to the top of the front panel. In a way, it looks great along with the mesh filter at the bottom. The colours on the RGB-enabled fans can be controlled to match your build.

PSU cut-out

It would be a shame if the PSU shroud completely covered your PSU. Show off your TUF PSU through the cut-out.

MasterWatt 750

The semi-modular PSU is 80 Plus Bronze rated and it will match the entire build.

Similarly, the cooling options get the same treatment. Both coolers, the MasterAir MA620P dual-tower heatsink and the MasterAir MA410M single tower heatsink, include MasterFan MF120R RGB fans which can be controlled using motherboard software or the included RGB LED controller. Each cooler supposedly has tool-free mounting and the universal retention brackets support Intel LGA 115x, 1366, and 775 sockets. On the AMD side of things, it is compatible with AM4, AM3+, AM3, AM2, FM2+, FM2, and FM1.
