

Driver's eye view of...

...your Hot Wheels track. Zoom In, made by Mattel and GoPro is a Hot Wheels car with a GoPro attached to it. <https://dgit.in/jul18-86-1>

Apple CarPlay gains Google Maps

Apple CarPlay will soon gain access to Google Maps and Waze for users that are predisposed to using them over Apple Maps. <https://dgit.in/jul18-86-2>

I, CYBORG

A day in the life of a cyborg

Aditya Madanapalle | aditya@digit.in

THE CAMERAS WERE FLASHING. The bright stage lights came on, and Udaya could barely see the people in the audience. His smart contact lenses could artificially brighten the faces, but he had an idea he had never tried before. He kicked up the animated emoji overlay, hoping that the GPUs could handle the mass of faces in front of him. It worked. All the people in the audience were replaced with random anthropomorphic animals – frogs, bunnies, elephants, pandas, cats and eagles stared up at him. Udaya's stage fright

evaporated. An overlay in his lenses prompted him through his presentation.

After the talk, Udaya went around the conference floor answering questions, meeting people, and building his network. It was the part he usually dreaded, but he had kept the XR overlays on. He talked to a morose jeroba, and scheduled a media interaction. Next up was an animated orangutan who wanted some technical questions answered. By the end of the day he had exchanged visiting cards with a dugong, an anteater and a dingo. After the conference, an argali showed up in his taxi. Udaya decided to turn the overlays off.
