

Philippines luring its scientists back

The govt is trying to draw Filipino scientists back to the country by paying them to set up their own research labs or teach. <https://digit.in/Aug18-10-1>

Medieval skeleton, deadly bacteria

Deadly type of Salmonella that is now rare in Europe is found in ancient Norwegian remains. <https://digit.in/Aug18-10-2>

FEEDBACK FOR THE JULY 2018 ISSUE OF DIGIT

Send your feedback at editor@digit.in

 Hello guys, you can consider me your biggest fan as I implement all remedies on technical issues given by you. Today, this email is for a different kind of request related to the DVDs you provide. Your DVDs are awesome, but every DVD has one or two useless OSes in them. You don't give OSes such as Kali Linux and the ones you do provide are pretty much all the same. So please fix this and give us more good stuff like games.

– Rahul Jha

d Hey Rahul, we only give important distros that people ask for, and try and maintain a balance between games, software, videos and distros. Many people complain about there being too many games...

– Abhijit

 I've been a reader of the magazine for nearly a year. I love this magazine for providing details about the latest gadgets, reviews, new game releases for PC, Mobile and PS4...

But the thing I love most is programming. Level up, Devworx, Workshops are a great source of knowledge but I feel like I need more – to know about the programming from its early stages, programmers from the beginning, and the recent hot topics in the field of programming. An

outline on the outdated programming languages. A detailed insight into every programming language and its pros, cons, uses... Ranking of those programming languages. Most sought after skills in the tech industry. And also languages recently released, and front-end and back-end languages for Web Development.

And for the Skoar issue, information on gaming engines like Snowdrop, Anvil, Massive, Unity, Unreal, etc., and about the prerequisite knowledge needed to be in game programming like C++, C#, Lua etc.

About Nvidia's cuda programming and skills sought by the gaming companies like Ubisoft, EA, Square Enix... And also the skills needed to get into Nvidia, Intel, Google and Facebook.

And in the Fast Track, info on topics like Virtual Reality, Augmented Reality, Human machine interaction, AI, Robotics etc.

And would like to read about "New Data Structures concepts that everyone should know about" in Dmystify.

And posters related to coding, Nvidia and inspirational quotes on programming...

And for the DVD, tools for variant programming languages and tutorials in tech and alt. In cult, videos related to game programming and in Sci, Data Structure classes...

Please make sure that the next issue is fully related to programming..

Hoping to receive a reply for this message on your decision about the suggestions made here...

– Navin Anto Felix Sagayam

d So... let me see if I can get this right... you're saying you want more programming related content? We will certainly try, though something tells me no matter how much we ever did, it wouldn't satisfy you! :-P

– Robert

 So this month it's been two years that I have been reading Digit. First a little about myself. I got to know about Digit in the year 2015 or basically when I was in sixth class. Since then I was searching for Digit on the magazine stands and many other stores. I even went to Chandigarh (Punjab) as I live close to there, in order to find it, but I didn't. Due to some economical reasons I was not able to subscribe to the magazine.

Then, one day when I was purchasing some stationary products, I looked up and noticed the magazine hanging there. I've been reading it ever since, and I cannot resist buying it. It has made me the "Tech Geek" of my class.

But enough about me, let's talk about the mag...

Pros:

- 1) The product reviews of the mag are really cool
- 2) The Tech as well as Alt sections
- 3) The DVD too has great software and distros in it.

Cons:

- 1) The magazine has got a bit boring. due to some "sci" lectures.
- 2) Please bring the Tips and Tricks section back.
- 3) The FT is a bit limited like in the last edition of Modding it was for only OnePlus phones.
- 4) The posters should be changed back to normal game posters (as I have to show off them to my friends)
- 5) And also this is written in CAPS because SEVERAL PAGES OF MY DMYSTIFY WERE TORN
