

Ghostbusters World = Pokémon Go

Ghostbusters World a new location-based AR game is just like Pokémon Go but with proton weapons. <https://digit.in/Aug18-12-1>

Sun's changing size

The Sun shrinks and grows again by 2 kilometers every 11 years on account of its magnetic cycle. <https://digit.in/Aug18-12-2>

Now here comes the final question. My school is conducting an annual exhibition in which i have been selected for the computer section. My teacher is asking for something big and special for it from me. Teacher gave me a little hints that it could be something of IoT with Raspberry pi or anything like that. So if you guys have any good yet cheap Idea than please let me know.

P.S.- I know that I am very late but please publish it as it took me around a week to make and write it. Here above the economical condition is not the money problem, but the problem of payment to you people as CoD is not available.

– Vidhu Sarwal

d Wow Vidhu that is a detailed email indeed, and we love getting emails like this.

Thank you for the feedback about what you liked, but as usual, we like to focus on what you don't like, because improving is what we like to focus on.

- 1) You want less science content? It's barely 6 to 8 pages in the magazine... is that too much?
- 2) The Tips and Tricks section never went anywhere, it's just renamed to Level Up, that's all.
- 3) Although we used only OnePlus phones as the examples, the idea is the same for all Android phones, and you should be able to use the same reasoning to mod any Android smartphone.

- 4) Your wish is our command
- 5) If you ever receive anything torn or damaged, or the DVD doesn't work, etc, all you need to do is drop an email to help@digit.in and request a replacement. provide pictures or whatever proof you have, and we will post you a replacement the next working day. You shouldn't wait though, because once the issue is sold out, even we don't have too many spares lying around.

Mithun will reply to you privately to help you with your project. We won't spoon-feed you though, merely point you in the right direction, because it's important that you do it yourself and learn from the experience.

Letter of the Month

I have been buying your Digit magazine since long back to update me about computer world being a computer professional.

Now it is observed that you have been changing your magazine from computer to science. Why are your leaving behind the computer, primary object? Who are your target group? Why are you so much interested in games, nothing but a purely pass times? Are the computer students as well as computer professionals getting any benefit from these games?

Earlier we got immense helps about computer. That's why, I did not miss to buy any of issue of your magazine.

Day by day, I have been loosing interest about your magazine. Now I have to think to stop buying your magazine and to break the long association with your magazine.

In my view, it will be better to divide your magazine, one for science and other for computer.

You are requested to help us by providing your valuable knowledge about computer, as it was

given by you earlier. Lastly, I would like to inform you that I am a very mediocre professional and a member of very middle class group.

– Biswanath Biswas

Hi Biswanath, thank you for taking the time to write to us. What you say is indeed very true. We have shifted a little more towards science than ever before, and also other aspects of a geek's life, which also includes gaming.

You will be shocked as to how big the gaming industry is becoming, and how fast it is growing. I will readily admit that playing games is certainly a passtime, and perhaps cannot be considered to be very useful, but it is an exploding industry that needs professionals working for it. You have to be an insider in the gaming industry to even be a game designer, or a coder, or a marketing executive

even. Because of how many people play games now, on consoles and PC and even mobile, one cannot afford to be working in the technology space without knowing at least the basics of gaming. In fact, there are people who use gaming strategy at work, people who are able to get along because of liking similar games, etc., and it's not something that is going to go away. It's an integral part of life in the global geek world.

See, we've always been dedicated to helping you navigate the world of technology, but what kind of navigators would we be if all we did was give you workshops and tips and tricks about computers? As much as I hate it (I'm a die-hard PC enthusiast), the world is moving on to many other things, and to be successful in the tech field, youngsters need to be well versed in all of the sections we have in the mag – technology, culture, science and even alternative tech.

That said, we certainly try and cover all we can about computing, and will certainly try even harder from now on.
