

CORRIGENDUM

We regret to inform you that last month the wrong image for NETGEAR Nighthawk Pro XR500 was carried in this section

Nest Rooftop popup tent

This pop up tent, inspired by sail boats, sits on the roof of your car and provides a resting place during your getaways. <https://dgit.in/Aug18-34-2>

HyperX Alloy Elite RGB

Only an RGB upgrade

Price
₹15,999

B

uilt with a sturdy steel top frame and plastic body, there's no compromise in build quality For the

HyperX Alloy Elite RGB. The only downside in build quality is the loosely fit keycaps. Some of them would pop out easily while typing. It isn't a deal breaker but will cause frustration among heavy users.

The keyboard uses Cherry MX switches across the Red, Blue and Brown variants. Gaming and typing performance was satisfactory. Since full N-key rollover has been implemented, we didn't notice any erroneous key presses. This means you can comfortably play all your favourite games without worrying about skipped or repeated key presses.

HyperX's new NGenuity software has a simple interface and it can improve drastically with more features. You can change the lighting effects on every single key and even create your own custom lighting effects. Reassigning keys and macro recording functionality is available as well.

At this price point, the HyperX Alloy Elite RGB isn't offering enough features. We would rather recommend the Razer BlackWidow Chroma V2. Not only does it include more features and better build quality, it has impressive software. However, for a lower price, you should definitely consider the Alloy Elite RGB.

—Abhijit Dey

SPECIFICATIONS

KEYBOARD SIZE: Standard, Numpad included | Keyboard backlighting: RGB | SWITCH TYPE: Mechanical (Cherry MX Red 50-million lifecycle) | POLLING RATE: 1000Hz (1 ms) | KEY-ROLLOVER: N-key rollover | INTERFACE: USB 2.0 | DIMENSIONS: Width - 44.4 cm, Length - 22.68 cm, Height - 3.63 cm | CABLE LENGTH: 1.8m | WEIGHT: 1.467 kg

ASUS ZenFone 5Z (ZS620KL)

All-rounder in a budget

A

sus continues to use their signature Concentric Design language for

the Asus Zenfone 5Z. The glass on the back just barely sticks out of the metal frame, giving the edge a not-so-seamless feel. The front is encased in 6.2 inches of Gorilla Glass which feels slightly less slippery than the back. The screen has 95% DCI-P3 (wide colour gamut) coverage but does offer 100% sRGB colour reproduction. This you can achieve by using one of the three provided colour settings. The Asus Zenfone 5Z scored 6317 in 3DMark Slingshot while the OnePlus 6 had scored 5702. Similarly, Geekbench single and multi-core scores were 2439 and 9002 respectively, higher than OnePlus 6's 2372 and 8502.

Along with a cleaner and leaner ZenUI, the phone has a number of AI features bundled.

While we were not able to tell for certain whether all of these worked as advertised or not, we do know that Asus allows you to toggle them. The primary lens has OIS while the secondary utilizes EIS. While taking photos outdoors, the AF is quick, and the photos look vibrant. That new ISP Qualcomm baked into the Snapdragon 845 is really working some serious magic. In our PCMark battery test, the phone lasted over 7 hours, while in real-world usage, the phone was giving an average of 7 hours worth of Screen on Time. With a starting price of ₹29,990, it is nearly impossible to ignore the immense value for money this phone has to offer.
