

Sky View on the Chiron

Bugatti has added a sky view option to the Chiron, which increases headroom and at the same time has a UV light filter. <https://dgit.in/Aug18-36-1>

Advanced bicycle tube

The tubolito is made with the same material used in smartphone speakers to make a durable, lighter, and smaller tube. <https://dgit.in/Aug18-36-2>

Lenovo Thinkpad X1 Yoga 2018

One of the best convertible laptops out there

The third-generation Lenovo ThinkPad X1 Yoga is a convertible business laptop that looks like the second-generation X1 Yoga. In signature matte black, the device looks rugged, understated, and full of promise.

Build and Design

The body of the ThinkPad X1 Yoga is made of a hybrid carbon fiber material. It feels durable and looks premium. In terms of dimensions and overall design, the third-generation ThinkPad X1 Yoga is a blatant facsimile of the second-generation model, and that's not always a bad thing, given it was a clever and reliable design to start with. You'd be hard-pressed to tell the difference between last year's model and this year's. There is one notable difference: it introduces ThinkShutter, a physical slider for covering the web camera manually.

I/O & Display

Unlike last year's model which included an OLED option, this year's ThinkPad X1 Yoga offers only 14-inch touchscreen LCD options: one FHD-resolution (1920 x 1080 pixels) IPS panel with a max brightness of 270 nits, and two WQHD (2560 x 1440 pixels) IPS panels — one with Dolby Vision and one without. Appearing on a ThinkPad for the first time, Dolby Vision brings support for HDR and has a max brightness of 500 nits. The model in review has the WQHD-resolution display, but no Dolby Vision. The display, even with its 270 nits of brightness, is exceptionally bright indoors and outdoors. Colours, however, are excessively saturated. For ports, we get one full-size USB port and two Thunderbolt 3 ports on the left; one of them gets eaten up for powering the

device. On the right, we have an HDMI port, DisplayPort, a 3.5mm audio jack, a Kensington lock, and another full-size USB port. On the back, there are slots for microSD and micro SIM. Camera options include a regular 720p sensor and a Windows Hello-supported IR camera. The latter does not get the ThinkShutter.

Keyboard and Touchpad

Named the 'Rise and Fall' keyboard, the keys on this keyboard operate like the keys of any other ThinkPad but retract to sit flush with body when the lid is closed or opened out in tablet mode. The touchpad on the ThinkPad X1 Yoga works perfectly without needing any third-party drivers. Apart from the left and right-click buttons under the trackpad, there are three physical buttons above the trackpad, namely left, right and middle-click buttons. The trusty TrackPoint is still around for those who prefer using it over the trackpad. The experience was smooth and pleasurable save for the stylus pen, dubbed 'Pen Pro', which simply refused to work on this device.

Performance

On benchmark tests like PCMark 8's Accelerated Creative test, Conventional Work and Home tests, the X1 Yoga trumped the Microsoft Surface Pro by at least six hundred points. It,

however, lost points in 3DMark's graphic rendering tests because it had no dedicated graphics card.

The device switched to tablet mode accurately when folded with no pauses or stutters. It was only when the application count rose over twenty that we saw some stutter, but even that was only in animation and not in performance as such. Despite an average CPU package temperature reading of 65 degrees Celsius, heat is generally manageable on the ThinkPad X1 Yoga, except when applications are being installed. It's all felt in exactly one spot on the base of the laptop—bang in the middle of the laptop's rear end.

Battery life

While using it for normal day-to-day work, like surfing the web, watching videos or just regular office work, the battery life was noted at 5-6 hours, with no CPU performance dips, even on battery. The 60Whr battery however is not powerful enough to sustain the gaming requirements at full load. However, if you just want to play DotA 2 or even Overwatch, the Y720 will provide ample frame rates even on battery and will last almost for 2 hours.

Bottomline

If you're looking to spend upwards of a lakh and a half on a fast and convertible laptop, consider the ThinkPad X1 Yoga. On the other hand, if you're already a user of last year's ThinkPad X1 Yoga, don't bother; your upgrades can be taken care of by one tiny roll of adhesive tape.
