

Alexa devices to play better

With Cloud ESP, all existing and new Alexa-enabled devices get the ESP feature that helps them play together better. <https://dgit.in/Aug18-39-1>

Not again Samsung

Samsung's advertising big batteries again, just two years after the Note 7 debacle. Will history repeat itself? <https://dgit.in/Aug18-39-2>

1More iBFree Sport

This upgraded version corrects the flaws of its predecessor

The 1MORE iBFree "Sport" is the upgraded and updated version of the older 1MORE iBFree, which was 1MORE's first attempt at making an entry into the fast-growing wireless in-ear headphones space.

Compared to the iBFree, The iBFree Sport has an added metallic button for powering on the device. The buttons are now slightly wider and have a better tactile feel. The Sport has an IPX6 ingress rating.

In terms of features the iBFree Sport gets the addition of ACC decoding (apart from aptX) and Bluetooth 4.2 but other than that it's pretty much the same as the iBFree. But sadly again this time as well no hardcase. The sound signature

has definitely changed, probably due to a new DAC on the updated chip.

The first difference noticed was that the bass has been bumped significantly.

The new 'Sport' iBFree has a more well rounded signature. It's not warm exactly, nor is the mid range clean, but thanks to the bass-bump music sounds a little fuller.

Quite frankly, there are many "Sport" oriented wireless in-ears out there that are available for half the price of the iBFree Sport. But almost all of them will have a water resistance rating of IPX4 and audio performance that is strictly ok. The iBFree Sport on the other hand takes it up a notch to IPX6 which makes it resistant to heavy rainfall. You not only get a stylish, rugged in-ear for your daily runs but also great audio performance. The full price of ₹3,999 is a little on the expensive side but if you find it on discount grab it for sure.

—Siddharth Parwatay

SPECIFICATIONS

BLUETOOTH: 4.2 | BATTERY LIFE: Standby 90 days, Talk 10 hours, Music 8 hours | WIRELESS RANGE: 10m | INPUT: 5V-1.0A max | IMPEDANCE: 32Ω | IPX: 6 | WEIGHT: 16g

BenQ Zowie XL2546 240 Hz Gaming Monitor

Built for competitive play

The Zowie XL2546 is a monitor that stands apart from the competition for a simple reason, it's built with the needs of gamers in mind. The XL2546 is certainly an upgrade over the XL2540 because of the added Dynamic Accuracy (DyAc) feature which does make a difference, and is thus, not a gimmick. The absence of Adaptive Synchronisation in the form of G-Sync or FreeSync isn't that critical because competitive games are very optimised compared to the AAA games which focus on eye-candy and rely on A-Sync to make up for the lack of optimisation.

What impressed us was the attention to detail that BenQ has paid while deciding on some of the simplest things such as the glare reduction on the inner

bezels. Sure, certain features such as Black Equalisation might be termed as cheating because it provides an undue

advantage, however, it's unlikely to get you banned since game clients cannot detect the same. That being said, we don't know if competitive leagues might allow such monitors to be used.

The panel is TN which is necessitated in order to hit the high refresh-rates and thus, we do see slightly off-colours in our colorimeter test. Then again, the input lag for the XL2546 is ridiculously low, which is a boon for competitive play. Overall, the Zowie XL2546 is paving the way for other display manufacturers in the gaming category.

—Mithun Mohandas

SPECIFICATIONS

PANEL: TN | SCREEN SIZE: 24.5-inches | RESOLUTION: 1920 x 1080 | REFRESH RATE: 240 Hz | CONNECTORS: DVI-DL, 2x HDMI, DP1.2 | AUDIO PASSTHROUGH: Yes | PROFILE CONTROLLER: Yes | CONTRAST RATIO: 1000:1 | RESPONSE TIME: 1ms (GtG) | POWER: 55 W | WEIGHT: 7.5 kg.
