that it's compatible with Android and iOS. However, when we connected it to the iPad Pro, the games weren't able to detect a controller. The gamepad uses a mini-USB port to charge itself which was weird since the rest of the game-

pads use a micro-USB port. This will be a problem since you'll have to carry an extra cable just for your gamepad. There aren't any trigger buttons and instead, they've given four bumper buttons on the top edge. You won't find

a smartphone holder on this one which could be a deal breaker for many. As already mentioned, this gamepad should be your choice only if you're on a really small budget and prefer playing on an ergonomic gamepad.
