Ant Man and the Wasp

★★★★☆ | Ever since Infinity War left us with that big, universe shattering snap, Marvel fans and newbies alike have been waiting for what Ant Man and the Wasp brings to the MCU. Given that the last Ant Man received mixed reviews, this one showed promise with the inclusion of the Wasp. The story kicks off in the aftermath of Captain America: Civil War, with Scott Lang in the final days of his house arrest for violating the Sokovia Accords. There's apparently also been a falling out with Hank Pym and Hope Van Dyne, since his use of the Ant Man suit in Civil War has put them in violation of the Accords too. They've been working on a project to bring Janet Van Dyne back from the Quantum Realm. The movie reveals an antagonist in Ava Starr A.K.A Ghost, who was the victim of a freak quantum experiment and can now 'phase' through solid objects and physical space. The entire movie plays out as a 'who has the shrunken lab' game and there's not much to talk about when it comes to the plot.

Perhaps one of the most informative moments in the movie is the part where it cracks a joke on its own overuse of the term 'quantum'. Marvel has overlooked critical plot loopholes and extremely impossible situations just to satisfy the plot. For instance, nobody spots a building randomly appearing and disappearing in the middle of the city throughout the movie? The only point to Ant Man and the Wasp is in the repeated visitations to the Quantum Realm as well as the insane mid-credits scene. For everything else, it's going down as one of Marvel's weak efforts.

TV SHOW

The Gifted

★★★★☆ | Fox brought The Gifted to continue the theme of portraying real-life acts of discrimination between humans and mutants. It presents a story in a world without the X-men, who were the beacon of hope for all the mutants but somehow they disappeared. The show doesn't explain their departure. In the present day, any mutant with destructive abilities losing control over their powers are detained. They are hunted by a special agency called Sentinel Services who will do anything in their power to arrest them.

The plot follows the Strucker family where the powers of the two children are revealed accidentally. The SS try to arrest them forcing the entire family to go on the run. They take shelter with the Mutant Underground, a secret group (hand picked by the X-men) that rescues helpless mutants, after a lot of difficulties. This group is led by John (Thunderbird), Lorna (Polaris) and Marcos (Eclipse). Right from the mutants to the humans, all the main characters have a backstory shown at the beginning of each episode. These short clips make you empathise with all these characters, making you realise that the conflict isn't just black and white. Season one ended on an interesting cliffhanger and season two has all our attention to be excited for what's coming next.
