

MOBILE PHONE USE IN INDIA

A peek into the analytics at the back end of Digit.in shows that our readers are interested most in smartphones. However, data collected by various organisations shows that smartphones are nowhere close to being ubiquitous in India even in the year 2018.

A MAJORITY OF CELLULAR SUBSCRIPTIONS ARE NOT USED¹

After China, India has the most number of cellular service subscribers in the world. Although the number of mobile subscriptions per 100 inhabitants is high, the actual usage falls alarmingly short of global levels.

MORE PHONES ARE BEING SOLD THAN EVER²

Over 88 million mobile handsets were shipped in Q4 2017, marking a historic high for sales. 70.5 million units were shipped in Q4 2013, but the fourth quarter saw a decline in shipments in 2014 and 2016.

FEATURE PHONES ARE STILL THE NORM^{1,4}
