

The first WTF while in this issue is when you realise there is no cover story. It will not be the last. Keep a mirror ready, and be happy that at least there is a cover.

The considerations of accessibility and ergonomics have resulted in some bizarre looking input devices that are straight out of sci-fi movies. One of them actually is!

When computer engineers give computers a mind, they are often surprised by the results.

You just need logic gates to make a computer, and you can build one using anything from people to crabs.

The humble mouse was reinvented multiple times

A number of enterprising Indian startups have built their businesses around a unique approach to solving a problem

Did you know there was an uber for cuddles?

Heard of Nikola Tesla's crazy wireless power transmission ideas? Well, we show you how to build a variation with over 900 volts!

Trust us, we are scratching our heads over this one as much as you are.

Agent001 is tempted to splurge on a brand spanking new graphics card. Nearly.

For the luls.

The bottom panel of the expanding brain meme.
