FEEDBACK FOR THE AUGUST 2018 ISSUE OF DIGIT

Send your feedback at
editor@digit.in

Hi Robert, Good Morning. I was going through your article "Faking it" in Digit yesterday. Your points are absolutely valid.

Educating the masses about such news is the most important thing. But there is a lot of groundwork to be done. They are many educated in the remote villages who still think about Upper and Lower caste. They do not understand that this is just a political game played by the politicians to get votes. Just like frog's in a well.

As you said, restricting them from get such information can do only some good.

I have a suggestion: We need the help of Telecom Industry to restrict the usage of data by increasing the prices. Why I'm saying this is, before JIO entering the telecom industry, I paid Rs 275 for 1GB of data for 28 days to Airtel. That's a lot of money! Now I'm paying Just Rs 99 for 2 GB data for 28 days, and full free calling to boot.

This cost reduction has erupted the usage of data. There are people who utilize it very well, but a lot of it is used in the wrong way. Every useless News & Message is getting forwarded and causing a lot of disturbance in the society. The telecom industry is just trying to make money rather than taking some social responsibility. An old saying in Sanskrit: "ATHI SARVARTHRA VARJAYETH"

An overdose of anything will give negative results and that's what is happening.

—Chaitanya Vangala

Thank you Chaitanya, I really appreciate you taking the time to send me feedback.

While it is true that a lot of data goes towards useless purposes, it's also true that more people get access to the technology because of falling costs. We just have to hope that as you and I learned how to sift through the overdose of information that technology provided, eventually, people who have just come onto the internet will learn as well. Cutting them off from the internet will only keep them enslaved to the evils of caste politics, that you pointed out.

Maybe it is my Digit bias, but I can't seem to accept the idea that less technology for people is ever the right answer. Hopefully we can find a way that doesn't involve something as drastic as that needing to be done.

—Robert

Hi digit, I am very honored to share feedback with you. Your magazine is very interesting, and good for today's tech geeks, and that's why I love it. Your magazine is important to digital India, and last month's Indian edition was very fascinating because it had science columns also. The design team's work

on the magazine every month is awesome (I salute them for that).

I have a few questions:

1. How to become a big streamer on twitch or YouTube?
2. Which PC parts are best for gaming but in gaming?
3. Who is agent 001 in your company?

Compliment:

You should add cheap gadgets in your magazine, but only gadgets which will be durable. Waiting for a reply.

—Syed Murtaza Rizvi

Hey Syed, Thank you for the compliments. I'll make sure to pass it on to the team. They're gaming right now, which is why I'm the one replying to your letter. Regarding your question on streaming, Abhijit has written a detailed article here (<https://digit.in/OBSYouTube>). As for becoming a "big streamer", that comes down to your marketing skills. Go live on a regular basis and listen to your audience. Also, share your stream links in as many gaming communities as you can. This will help you get more viewers to begin with and then you should let the YouTube/Twitch algorithm work its magic.

I don't know if I got your question right but let me try answering anyway. For gaming, the CPU, graphics card, RAM and storage matters the most. That's to get the game running on your PC. As for your experience with gaming, then a good audio solution along with the keyboard and mouse can make a world of a difference. And about me... Agent001 is an enigma.

—Agent001

Hi Arnab, I enjoy your columns in Digit. I have to do a paper on Start-ups for my IT subject in MBA. Can you please suggest some sources for:

- History of digital start-ups.
- Data - industries, etc
- Success-failure factors etc.

Very grateful to you. many thanks.

PS: Will discuss your columns with friends and share our views

—Nidhi
