WHAT'S NEW

NVIDIA announces RTX 2080 Ti, 2080 and 2070 Graphics cards

NVIDIA held its much-awaited press event for the new Turing-based GeForce 20-series graphics cards at Gamescom 2018. NVIDIA CEO, Jensen Huang revealed the GeForce RTX 2080 Ti and the RTX 2080 as the first set of graphics cards from the 20-series. NVIDIA opted for the new RTX branding to promote the significant ray-tracing performance increment that the new RTX 2080 Ti, RTX 2080 and RTX 2070 are capable of. Official Indian

pricing for the GeForce RTX 2080 Ti Founders Edition is ₹1,02,500. The GeForce RTX 2080 is selling for ₹68,500 and the GeForce RTX 2070 at ₹51,200. Board partners will be selling their cards at much lower prices. While pre-order have begun on 20 August, 2018 for the new Turing based NVIDIA GeForce RTX 2080 Ti, 2080 and 2070, customers will only be getting their cards starting from September 20th.

Netflix starts showing its own ads between episodes

Netflix has been lauded in the past for its ad-free approach. However, it has begun testing with ads in some markets. Netflix subscribers in the UK have started seeing promotional clips in between two episodes. As of now, these advertisements are simply recommendations from Netflix's own libraries. Netflix justified this approach to Arstechnica by saying, "A couple of years ago, we introduced video previews

to the TV experience, because we saw that it significantly cut the time members spend browsing and helped them find something they would enjoy watching even faster." These video previews autoplay

between episodes and are not being received in a positive manner. Numerous users took to Netflix's subreddit to voice their disapproval with many claiming that they moved to Netflix to escape advertisements. Some users even claimed that if Netflix offered a free subscription tier supported by ads, then they'd be fine with it. Netflix has included the ability to opt-out of this beta-test.

Facebook rating users' trustworthiness

Facebook is rating its users between 0 to 1 on the basis of trustworthiness. This reputation score is part of Facebook's efforts towards combating fake news and posts from people with a low trust score will supposedly not have a good reach.

Amazon's face recognition faux-pas

Rekognition, Amazon's face recognition software falsely matched 28 US lawmakers with mugshots of criminals in a test. A large number of those misidentified were people of colour, raising concerns of racial bias in the AI.
