

Recreating Hiroshima in VR

A team of Japanese students have recreated the Hiroshima nuclear bombing as a VR experience. <https://digit.in/sep18-26-1>

Dont complain about the battery

Are you perpetually dissatisfied with the battery life on smartphones? Well, it could have been much worse. <https://digit.in/sep18-26-2>

THINKING OUTSIDE THE BOX

India is home to thousands of startups. Out of these thousands of startups, some are able to captivate your attention with their out of the box approach to a problem or by solving a problem that people didn't even know existed.

Abhimanyu Mehta |
feedback@digit.in

The recent startup trend is far from simmering down and is showing no signs of retreating. Indians are known to be innovative and inventive people. With the combination of elements such as a huge market, stringent competition in the job sector and a multitude of willing, inventive youth, India is home to an abundant amount of startups. Hence, it is no surprise that

India has a few out of the box startups as well. These startups try to solve a very niche problem and would even be considered outright bizarre by some.

PLONK

Apart from being known as the silicon valley of India, Bengaluru is also infamous for its maddening traffic. Finding a place to park in a city with such bustling traffic as Bengaluru can be a herculean effort. Brothers Arjun Jairaj (CEO) and Balram Jairaj (COO) and John Seemon (CTO) thought of solving this problem by creating the application 'Plonk'.

Plonk aims to solve one of Bengaluru's biggest problem: Parking.

The application brings a database of unorthodox parking places to users like empty plots, apartments etc along with the usual parking preferences. They even give an opportunity to land owners to list their land or possible parking space and make

money out of it. This works out both from the supplier and the consumer. The startup takes a 10 percent cut from the payment. To use Plonk, you have to scan the QR code which is provided to that particular parking spot, and then pay using an online wallet or with cash. A simple and well thought of solution to a huge and seemingly unsolvable problem. Seems dystopian doesn't it? We are only getting started.

BORIYA BISTAR

Now this is one startup that every bachelor is going to love. Moving into new places is never an easy job. After the struggle of finding the right place to call home, the job is only half done. Every person handling the process of moving out by themselves has to go through a long list of tasks which include finding the basic amenities like mattresses, buckets, kitchenware etc. The Bengaluru based, aptly named startup 'Boriya Bistar' aims at making this whole transition a lot smoother and easier. Customers can purchase any kind of mattresses or bean bags from their official website but their speciality lies in the three bundles that they provide i.e. Basic

What more could a bachelor need?
