

Free iCloud space

New subscribers to iCloud on the four big US carriers can get 200GB free iCloud space for two months. <https://dgit.in/sep18-36-1>

Fortnite going robust

A "robust competition system" will have players square off against each other within the same match. <https://dgit.in/sep18-36-2>

ADATA XPG Spectrix D80 DDR4 RAM 16 GB 3600 MHz

Hybrid liquid-air cooling

Price
₹18,000

A

DATA came out with what it calls the world's first hybrid liquid-air

cooled RAM modules in the form of the ADATA XPG Spectrix D80. The modules have a hermetically sealed chamber on the top which houses some 3M Novec liquid which has high thermal conductivity but no electrical conductivity. Upon reading all the SPD data, we find that the ADATA XPG Spectrix D80 uses Samsung B-die chips. This fact in itself is reason enough to warrant consideration. There are two XMP profiles on the module with the default one being 2666 MHz running at 1.2 volts and the exotic one being 3600 MHz @ 1.35 volts.

Using Super Pi these modules clocked in at 420.433 seconds, so they're pretty fast. At peak, the aluminium heatsink clocked in at 46 degrees Celsius which is about five minutes into the SuperPi run.

The ADATA XPG Spectrix D80 makes for a really exotic looking RGB memory kit. That's just the looks, the hybrid liquid-air heatsink design is even more outlandish but not as effective. While ADATA's claim does check out, the cooling efficacy of the liquid part is suspect given that it's housed in a plastic chamber with poor thermal conductivity. All said and done, the Spectrix D80 is certainly a preferred kit among the enthusiasts.

—Mithun Mohandas

SPECIFICATIONS

TYPE: DDR4 | CAPACITY: 2x 8 GB | RATED SPEED: 3600 MHz | TIMINGS: 17-18-18-38 | OEM: Samsung B-die | PART NO: K4A8G085WB-BCPB | RANKS: 1 | BANKS: 16 | WARRANTY: Lifetime

Rapoo VPRO V26S

Surprisingly good build quality

T

he Rapoo V26S tries to make its place in the entry-level

segment and brings some worthy pointers. In terms of looks, the mouse is illuminated with six RGB LEDs beneath a mesh pattern on the mouse. It definitely looks attractive with the RGB lighting that keeps cycling in a rainbow effect.

A DPI button on the top allows you to switch between the seven DPI values up to around 3800 even though it advertises to reach a DPI value of 7000. When you cycle through the DPI values, all the LEDs blink a few times in different colours for every DPI value. However, once it has been set, there's no way to determine the active DPI value. The website mentions a software but the download links for the same is greyed out. With the absence of any software, it isn't possible to customise and save mouse configurations onto the mouse.

For the left and right clicks, the V26S uses the Huano blue shell white dot microswitches rated at 20 million clicks. It's difficult to come across such high-rated switches in this price offering. The USB connector has been gold-plated as well. It's clear that Rapoo was paying attention to build quality. Apart from that, the PMW3320 is an average sensor with a low maximum tracking speed that spins out on quick flicks. We all competitive FPS gamers to stay away from this one. We only recommended the V26S if you intend on using it for casual gaming and regular use.
