Samsung Galaxy Note 9

When the Galaxy S9+ and the Note 8 have a baby

While companies remain bullish about their yearly flagship update cycle, innovation on the components that make a smartphone “amazing” has slowed down. That is the challenge which Samsung had to surmount with the Samsung Galaxy Note 9.

Build and Design

The Samsung Galaxy Note 9 retains the shape of the Note 8, which is a tall, blocky build with sharper corners in comparison to the Samsung Galaxy S9+. The build is glass held together by a sturdy metal frame. The back has the dual camera module laid out horizontally, but the fingerprint sensor has been moved below the camera unit. The phone is IP68 rated despite having a headphone jack and a housing for the S-Pen.

Display

It has a 6.3-inch Super AMOLED display with a resolution of 1440x2960 putting the pixel density of the display at roughly 513 ppi. Using the Samsung Galaxy Note 9 outdoors is when you realise the true potential of this display. Webpages and text look crisp and frankly, there's not a single fault to be found with the Samsung Galaxy Note 9's display.

S-Pen

The S-Pen feels like it got some attention from Samsung to make the Note 9 special. While it continues to do everything, you've come to expect of it, the ability to also double up as a remote control is pretty awesome and helps you avoid accidental Bixby button triggers while taking selfies. The best thing is, it doesn't require the phone's Bluetooth radio to be toggled on. It uses low power Bluetooth, so it barely uses any power.

Price
₹67,900

every bit the top-notch performer we have come to expect from Samsung.

Battery

In daily usage, the phone was easily going strong for a day and a half. Topping up the phone took about 110 minutes, with the first 50 percent charging up in about 40 minutes.

Bottomline

The Samsung Galaxy Note 9 is a brilliant device, but then again, so is the Samsung Galaxy S9+ and in fact, so is the Note 8.

Performance

For gaming or day to day performance, the Samsung Note 9 manages to keep up without breaking a sweat. Long gaming sessions on Asphalt 9 and Injustice 2 were rather enjoyable, without any dropped

frames. Whether its juggling between multiple Chrome tabs or editing RAW files in Snapseed or putting together a PowerPoint presentation, you're not going to feel any kinds of slow-down whatsoever. What was even more impressive was just how well Samsung has managed to control the heat issue. The Galaxy Note 9 is supposed to have a “carbon liquid cooling” system on the inside, which as it turns out, does work really well.

Camera

With Samsung jumping onto the intelligence bandwagon, scene recognition automatically applies a mild colour correction to the photo. The camera warns you about flaws, such as closed eyes or moving subjects. In terms of overall performance, the Samsung Galaxy Note 9's camera is

FEATURE.....	90
PERFORMANCE.....	86
VALUE.....	52
DESIGN.....	88

You don't get a better display than the other two, because they display on Samsung's flagship is as good as it can be, for now. In all honesty, the only thing the Note 9 has to itself is the S-Pen which doubles up as a clicker. If you don't need the S-Pen, you would be better off with the slightly cheaper Samsung Galaxy S9+, which comes in arguably better colours than the Note 9 has to offer. If you have a Note 8, there's very little reason to upgrade. The Samsung Note 9 is, however, ideal for anyone coming from a flagship of 2 generations ago, or older. It's performance is reliable, it has a class leading display, a camera that won't let you down and a battery that lasts longer than other flagships.
