

App to screen heart

A smartphone application (app) can help in screening for atrial fibrillation, according to DIGITAL-AF study. <https://digit.in/sep18-43-1>

Clownfish trickery

Animals use bright colours to advertise toxicity, but clownfish are colourful because their hosts are venomous. <https://digit.in/sep18-43-2>

Boat Rockerz 275

A flexible build, and a well done warm audio signature

When it comes to build, Boat Rockerz 275 does something interesting with the neckband design - it makes it nearly all rubber. We're talking 'tie it into a knot' level flexible here.

The earpieces have magnetic backs which prevents them from dangling around during your workouts. The bluetooth IEM also comes with IPX5 water resistance so you can use it without worrying in the rain or during sweaty workouts, as long as no immersion is involved. The 150mAh battery holds up pretty well for the better half of 7.5 hours, and in its dying stages, also gives you audio cues. The Boat Rockerz 275 has a sound signature leaning towards the warm side. One

of the biggest issues with the 275 is the limitations in its headstaging capabilities, which is evident in complex tracks like Bjork's Hunter. Push it anywhere beyond 75% of the volume

and most bright notes suffer from treble peaking. The Rockerz 275 are going to be particularly enjoyable to most bassheads. That being said, the

higher frequencies do sound cheap and there's a distinct lack of clarity after a certain level. Put Hello by Adele on and you'll see what we mean.

The overall sound on the Rockerz 275 is best described to be closed, forward and warm in nature.

Almost all bassheads looking for a cheap, dependable piece of bluetooth hardware then the 275 will not disappoint. Expecting a neutral, balanced audio experience? You better look somewhere else.

—Arnab Mukherjee

SPECIFICATIONS

BLUETOOTH VERSION: V4.1, CSR#8635 | SUPPORT PROFILE: HSP,HFP, A2DP & AVRCP profiles | 10 meters operation range (open area) | BUILT-IN LITHIUM BATTERY: 150mAh / 3.7V | SPEAKER DIAMETER: 12mm | IMPEDANCE: 32ohm | S/N RATIO: 102dB at 1kHz | FREQUENCY RESPONSE: 20Hz-20kHz

Sound One Rock

Affordable, but without depth

While most devices in this price range attempt a high-end finish on cheaper material like plastic, the body of the Rock speaker is covered with metal on the sides. The 3W speaker blasts out music to the point where you might have to take measures to stop it from vibrating off certain surfaces.

The Sound One Rock tries to come across as a good portable speaker for bassheads, but the bass is anything but impactful. What is happening here is that the speaker tries to compensate for its lacking impact with loudness, which makes it quite a drab experience. When it comes to other kinds of music, the Sound One Rock is

FEATURES & SPECS....	52
PERFORMANCE.....	65
DESIGN.....	75

incapable of providing any depth to complex tracks with a number of instruments. The overall sound signature of the Sound One Rock tends towards the warmer side, and on relatively instrument-free tracks, it does a pretty good job.

There are a couple of other issues that plague the Sound One Rock's performance. For starters, we noticed

a delay in the audio playback while streaming video content. While it wasn't persistent with other devices, it was quite noticeable. With the 3.5mm audio jack, the issue was the connection stability, with the slightest movements sometimes causing the speaker to be disconnected from the audio source. The mic placement on the device is not entirely clear, although its performance is satisfactory. If you're looking for a mindless room-filler that can do the job and not cost you a bomb, the Sound One Rock isn't a bad option. Look beneath that shiny exterior for quality and pretty soon you'd want to opt for something else.
