

THE MARCH OF MINIATURISATION

It is no secret that gadgets have been becoming smaller, lighter and more powerful over the years. However, by how much has this happened?

MEMORY CARDS | DECREASED IN SIZE: 78%

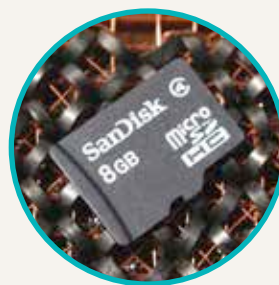

COMPACT FLASH

The Compact Flash standard is still commonly in use today, particularly in high-end hardware and digital cameras. The cards were $43 \times 36 \times 3.3$ mm in size and were first manufactured by SanDisk in 1994.

SECURE DIGITAL

The Secure Digital cards are commonly known as SD cards, and were the removable storage of choice for mobile phones, cameras and portable media players. There was a toggle for write protection, and the cards were $32 \times 24 \times 2.1$ mm in size.

MICRO SD

SanDisk remained at the forefront when it comes to memory cards. The $15 \times 11 \times 0.7$ mm sized Micro SD cards were announced by SanDisk in 2006. The smaller cards were perfectly sized for being used in smartphones.

MOBILE PHONES | DECREASED IN SIZE: 96%

MOTOROLA DYNATAC

The Motorola DynaTAC 8000X was the first commercially available cellular phone. After charging for 10 hours, it offered 30 minutes of talk time. The device weighed 2 kg, and was $3300 \times 898 \times 445$ mm in size.

NOKIA 8110

The Nokia 8110 was the first "slider" phone. It measured $141 \times 48 \times 25$ mm in size, and weighed only 145 grams. It was among the smallest and lightest phones available at that time, and was famously featured in The Matrix.

JELLY

The UniHertz Jelly Pro is among the smallest smartphones in the market, with dimensions of just $92 \times 43 \times 13$ mm. Despite the small size, the phone comes with all the functionalities of Android 7.0.
