

Space Lawyer

A space lawyer answers legal questions about space - such as who owns the moon? And, where does space start? <https://digit.in/sep18-84-1>

Is it okay to snoop on partners?

Marriage therapists weigh in on if it is okay to go through your partner's smartphone, and the answer is: No. <https://digit.in/sep18-84-2>

Just Another Day in 2800 AD

A day in the life of an AI psychologist and teacher who spends her day nurturing both young minds and robots alike to keep the planet's glory intact.

Boon Yil, deep in thought

CHAPTER ONE: LIFE AS THEY KNOW IT

It was a fine morning in the township of Hastala and Boon Yil was preparing for her fifteen students to waltz in any minute now. She was gearing up to initiate them into their "knowledge phase" prescribed by the "universal board of historical education of all living beings."

Boon Yil smiled morosely to herself at something her partner said to her when they were away at the waterfalls last week. "Some things still stayed the same since the dark ages, sadly," she muttered to herself. She hung her wings on the peg and started lighting the biowaste-fuelled lamps. An orange luminous glow cascaded down to the end of the room. She was telling him about her upcoming lesson plans and the importance of teaching the young ones about the dark ages that the world went through between 1930's and 2050's. The dark grim times when human beings wreaked havoc with their low morals and inflated ego. "It's just a teaching job", he concluded with an attempt to change the subject. "I am an AI psychiatrist! I take care of the minds of our robots and living-beings alike. I ensure that they exist in harmony and the robots continue to keep our

planet sustainable!" She retorted. He scoffed, almost a chortle as he checked the settings on panels before he dove into the waters. Spirul the Robot, was assigned this job. Spirul confirmed for him that the waters were nontoxic and had a perfect micro ecosystem with the right temperature. Spirul looked at Boon with an empathetic smile, telepathically asking her to leave it be. She let it go this time. As a civilization, we are yet to master the art of assigning importance to nurturing mind-sets at a young age. A mind caretaker was dubbed as "just a teacher" even in these evolved times of 2800 A.D.

Her mind was back to the present now. She was about to spend the next 720 of her human breaths in enlightening innocent minds. Spirul and gang waited for instructions from her. She told them how important their role was to set up a good learning atmosphere and how they should support these young students. Off they went, gathering nectar from willing flowers, water from the pond and seaweed sheets from the lake for snacks. The silkworms liked Spirul and his team. They had knit a few warm blankets under Spirul's supervision. The classroom was all set now. There were acorns for Rick, the squirrel, and a beautiful pot made from volcanic glass for Phyllus, the class amoeba. Elijah, the resident tiger, had his spot with Monty, the Python, as they both rested under the weeping Willow William. It was cosy, comfortable and abundantly nourished for its various students.

CHAPTER TWO: ONE BY ONE, THEY ALL FILE IN

Brinner, the butterfly was the first to arrive. "Hello Boon. So good to see you. What's on the menu today?" He quipped.

"It'll make you shudder and yet intrigue you. I've set up your spot right here. The daffodils are happy to let you be perched on them for today's class. You'll need the comfort my dear"

"Dark ages? Is that what we are talking about today? I will need the comfort! Them humans back when...", Brinner sighed and flitted toward the daffodils.

By the next sixty breaths, the classroom was brimming with a set of thirty curious and eager eyes that waited with baited breath for Boon Yil to start her lesson.

"How would you have liked to live in a world when there was fundamentally something wrong in the way it functioned? What do you think of a world that generated enough waste that circled the planet in an orbit and drenched the ocean in a formidable stench? And worse, what do you think of not having the ability to communicate between different species and not
